# DEPARTMENT OF MATHEMATICS 

## Programme: B. Sc. Mathematics

## Vision

To be among the top ten centers of excellence in Mathematics at the national level through quality Mathematics education and research.

## Mission

Department of Mathematics, through our enlightened management and committed faculty envisages to

- provide world-class education to the students of Mathematics
- give them a learning-centered environment
- ensure knowledge transfer
- instill research aptitude
- infuse ethical and cultural values
- transform our students into disciplined citizens in order to improve their quality of life.

## Program Educational Objectives:

| PEO1 | The programme provides a strong foundation in breadth and depth of Mathematics <br> and some specific areas of computer science which enables the student to pursue <br> post-graduation in Mathematics, Applied Mathematics and computer applications. |
| :---: | :--- |
| PEO2 | The programme also inculcate certain quantitative skills (self-confidence, leadership, <br> decision making etc.) which would prepare students for managerial careers and <br> transform the stakeholders into successful entrepreneurs. |
| $\mathbf{P E O 3}$ | The practical and technical knowledge ensure significant and rewarding career <br> opportunities in various service domains both National and Global level. |
| $\mathbf{P E O 4}$ | The programme will stimulate logical and analytical reasoning that enables the <br> students to crack competitive exams. |
| $\mathbf{P E O 5}$ | With an interdisciplinary learning environment, the student develops necessary skills <br> and values to handle diversified circumstances either individually or as a team. |

## Program Outcomes:

On successful completion of the B.Sc., Mathematics programme, Students can able to

| PO1 | Communication skills: <br> Develop confidence, positive attitude and interest towards Mathematics through <br> communication skills. (K1) |
| :---: | :--- | :--- |
| PO2 | Disciplinary knowledge: <br> understand and apply basic concepts of Mathematics, Statistics and Physics and <br> their importance in the solution of some real-world problems. <br> (K2) |
| $\mathbf{P O 3}$ | Critical thinking: <br> apply various Mathematical techniques within the domain and also extend to <br> multi-disciplinary environment. $\quad$ (K3) |
| $\mathbf{P O 4}$ | Problem solving: <br> analyze and make critical observations of any situation with Mathematical approach <br> and demonstrate ways to solve them logically with precision. $\quad$ (K4) |
| $\mathbf{P O 5}$ | Research related skills: <br> endorse independent learning of languagepapers and acquire sound knowledge to <br> understand the basic branches of Mathematics and apply in research.(K3) |
| $\mathbf{P O 6}$ | Analytical reasoning: <br> have thorough grasp over the concepts which faster individual discipline, <br> responsibility and commitment and ensure professional ethics. |
| $\mathbf{P O 7}$ | Self-directed learning: <br> formulate new problems and find the ideas to attain their solutions and develop the <br> codes using C and C++ languages for simple problems. (K4) |

## Program Specific Outcomes:

| PSO - 01 | provide advanced knowledge on topics in pure and applied Mathematics, <br> empowering thestudents to pursue higher degrees at universities and reputed <br> academic institutions like NBHM, NIT, IIT, IISC etc. |
| :---: | :--- |
| PSO - 02 | motivate and prepare students to clear civil service exams and to get <br> employability in education, IT, Banking and insurancesectors and also to become <br> successful entrepreneur . |

|  |  | CLASSICAL <br> ALGEBRA | Semester: | I |
| Lecture Hrs./Week or Practical Hrs./Week | 5 |  | Credits: | 4 |

## Course Objective

This course provides the learners a wide spectrum of basic mathematical concepts includingsummation of series, roots of an equation and matrices.

## Course Outcomes

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :--- | :--- | :---: |
| CO1 | Apply the numerical methods for approximating the solution to <br> problems of algebraic and transcendental equations. | K 3 |
| CO2 | Apply the concepts of convergence and divergence of series using <br> various tests like Cauchy's root test, D'Alembert's ratio test to solve <br> problems. | K 3 |
| CO3 | Solve problems related to Binomial, Exponential and Logarithmic <br> series. | K 4 |
| CO4 | Apply Newton's method of divisors and Horner's Method to <br> analyze the nature of the roots. | K 4 |
| CO5 | Diagonalize the matrix using Cayley-Hamilton theorem. |  |

|  | CALCULUS |  | Semester: | I |
| Lecture Hrs./Week <br> or <br> Practical Hrs./Week | 6 |  | Credits: | 4 |

## Course Objective

This paper enables the students to gain the ability to solve the problems related to multiple integrals, Beta and Gamma functions. It also provides the basic knowledge about Laplace transforms and use it to solve the differential equations.

## Course Outcomes (CO)

On successful completion of this core paper, the students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :--- | :--- | :---: |
| CO1 | Recall the methods of solving ordinary differential equations. | K1 |
| CO2 | Solve the linear differential equations with constant and variable <br> coefficients. | K3 |
| CO3 | Compute area and volume of the solids using multiple integrals | K3 |
| CO4 | Analyze and apply the concepts of Laplace Transform, inverse <br> Laplace Transform to solve linear ordinary differential equations <br> with constant coefficients. | K4 |
| CO5 | Expose differential equation as a powerful tool in solving problems <br> in Physical and Social sciences. | K3 |

## Course Objectives

The aim of this course is to introduce the concept of discrete and continuous random variables, probability functions, expectations, moment generating functions and some discrete and continuous distributions and should have developed skills to apply them to various real life situations.

## Course Outcomes (CO)

On successful completion of this core paper, the students will be able to

| CO <br> Number | CO Statement | Knowledge <br> level |
| :--- | :--- | :---: |
| CO1 | Understand the concepts of random variables and probability <br> distributions in two dimensional space. | K 2 |
| CO2 | Compute expected value and variance of discrete and continuous <br> random variables. | K 3 |
| CO3 | Understand and analyze the discrete distributions such as Binomial and <br> Poisson distributions. | K 4 |
| CO4 | Analyze the continuous distributions such as normal, beta, gamma, <br> exponential and rectangular distributions | K 4 |
| CO5 | Use statistical tool effectively to analyze real life problems and to be an <br> efficient statistician. | K 4 |

## Course Objective

The objective of this paper is to introduce the concepts about correlation, regression, sample theory, sampling distributions and theory of estimation.

## Course Outcomes (CO)

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| CO 1 | Understand the basics of regression line and the principles of <br> least squares. | K 2 |
| CO 2 | Apply the concept of correlation and rank correlation in real life <br> situations. | K 3 |
| CO 3 | Analyze the concepts of sampling techniques and procedure for <br> testing of hypothesis for large samples. | K 4 |
| CO 4 | Apply chi square, t and F distributions for testing of attributes as <br> well apply the Cramer Rao- inequality for estimation. | K 3 |
| CO 5 | Find good estimators for an unknown parameter using estimation <br> theory | K 3 |

## Course Objective

This course helps the students to have an in-depth knowledge of various advanced methods in numerical analysis. The students to use numerical techniques to get numerical solutions of equations like transcendental and non-linear differential equations when ordinary analytical methods fail.

## Course Outcomes (CO)

On successful completion of this core paper, the students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| CO 1 | Understand the need of numerical analysis techniques in the areas of <br> Approximation theory, and recall some basic concepts. | K 1 |
| CO 2 | Apply the numerical methods for approximating the solution toproblems of <br> algebraic and transcendental equations, simultaneous linear equations. | K 3 |
| CO 3 | Estimating the value of a function for any intermediate value of the <br> independent variable using Newton Forward and Backward interpolation <br> Formula as well compute the derivatives using Newton's forward and <br> backward difference formula and Sterling's formula. | K 3 |
| CO 4 | Solve the ordinary and partial differential equations by usingNumerical <br> method techniques like Taylors method, Euler's method, RungeKutta <br> method etc. | K 4 |
| $\mathrm{CO5}$ | Enrich the knowledge of numerical techniques and getting insight of <br> algorithmic approach. | K 4 |

| Lecture Hrs./Week <br> or <br> Practical Hrs./Week | 3 | Credits: | 3 |  |

## Course Objective

C is a general- purpose structured programming language that is powerful, efficient and compact. The programming language C finds a wide variety of applications in the development of software. This course provides the students with all the fundamental concepts of the C language with some practical experience. Also helps the students to develop their programming skills and to build large programs.

## Course Outcomes (CO)

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| CO1 | Understand the keywords, C-data types and variables. | K2 |
| CO2 | Apply the use of statements and looping structures. | K3 |
| CO3 | Analyze the concepts of user-defined functions, in-built <br> functions and nesting of functions | K4 |
| CO4 |  <br> pointers. | K 3 |
| CO5 | Sense the basic structure of C program and apply them to <br> small projects. | K3 |

## Course Objective

The prime objective of this paper is to introduce certain OR techniques such as LPP, Transportation problems, Assignment problems, Sequencing and Replacing models to help the students to develop logical reasoning for applying mathematical tools to managerial and real life oriented problems.

## Course Outcomes (CO)

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| $\mathrm{CO1}$ | Formulate real world problems as an LP model and explain the <br> relationship between a linear program and its dual. | K 2 |
| CO 2 | Solve linear programming problems using appropriate techniques <br> and interpret the results. | K 3 |
| CO 3 | Understand and solve replacement problems, build and solve <br> specialized linear programming problems like transportation and <br> assignment problems. | K 3 |
| CO 4 | Effectively communicate ideas, explain procedures, devise <br> optimum allocations, interpret results and make firm decisions. | K 4 |
| CO 5 | Identify and develop operational research models from the verbal <br> description of the real system in the areas of management science, <br> industry, engineering fields and transportation. | K 4 |

## Course Objective

This course is designed to provide a practical knowledge to the students on $\mathrm{C}++$. Course Outcomes (CO)
On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| CO 1 | Develop the OOPS program to understand the concepts of <br> multi dimensional arrays. | K 3 |
| CO 2 | Develop the program to understand the concepts of <br> constructors, destructors and overloading constructors. | K 4 |
| CO 3 | Develop the program for single and multilevel inheritance. | K 4 |
| CO 4 | Develop the program for understanding the concepts of <br> pointer object and polymorphism. | K 4 |
| CO 5 | Competent in developing the programming code and <br> debugging. | K 5 |

## Course Objective

The course aims to introduce some OR techniques like Integer programming, Gold programming, dynamic programming etc. to build capabilities in students for analyzing different business situations involving limited resources and obtained logical solutions.

## Course Outcomes (CO)

On the successful completion of the course, students will be able to

| CO Number | CO Statement | KnowledgeLevel |
| :--- | :--- | :---: |
| CO1 | Recall Linear programming techniques, understand and apply <br> advanced techniques in linear programming and duality to real life <br> problems |  <br> K3 |
| CO2 | Understand and solve variety of problems such as replacement <br> problems, transportation problem etc. | K2 <br> K K |
| CO3 | Sketch the theoretical workings of Integer programming, Goal <br> programming, Dynamic programming problems and their solution <br> procedures. | K3 |
| CO4 | Analyze any real system and formulate Mathematical models. | K4 |
| CO5 | Make effective decisions under various business situations by <br> applying appropriate optimization techniques. | K4 |

## Course Objective

This course provides an introduction to the basic mathematical concepts and techniques used in finance and business, highlighting the inter-relationships of the mathematics and developing problem solving solutions with a particular emphasis on financial and business applications

## Course Outcomes (CO)

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :--- | :--- | :---: |
| CO1 | Demonstrate an understanding of the term structure of interest rates. | K2 |
| CO2 | Define and describe in detail, the use of simple and compound rates <br> of interest and distinguish between nominal and effective rates of <br> interest | K3 |
| CO3 | Demonstrate an understanding of concepts relating to annuities | K3 |
| CO4 | Describe in detail the various types of annuities and perpetuities and <br> use them to solve financial transaction problems | K3 |
| CO5 | Demonstrate their ability to apply the technical solutions related to <br> the course in a practical context. | K3 |

|  |  | LINEAR ALGEBRA | Semester: | VI |
| Lecture Hrs./Week or Practical Hrs./Week | 6 |  | Credits: | 4 |

## Course Objective

To enable the students to study how to solve system of linear algebraic equations, basic concepts of an algebraic structure namely vector space and its properties of linear transformations on vector spaces and their relation between matrices.

## Course Outcomes (CO)

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| $\mathrm{CO1}$ | Solve systems of linear equations and to reduce the <br> augmented matrix to echelon form or to row reduced <br> echelon form. | K 3 |
| CO 2 | Understand the basic ideas of vector spaces and the <br> concepts of span, linear independence, basis, dimension and <br> to apply these concepts to vector spaces and subspaces. | K 2 |
| $\mathrm{CO3}$ | Find row space, column space, null space, rank and nullityof a <br> matrix and to understand the relationship of these <br> concepts to associated systems of linear equations. | K 3 |
| CO 4 | Apply the principles of matrix algebra to linear <br> transformations and analyze the competence with the basic <br> ideas in Vector spaces, Dual spaces and linear transformation. | K 4 |
| $\mathrm{CO5}$ | Enrich the knowledge in Linear Algebra to pursue higher <br> degree in Mathematics and other discipline, as well to get <br> employability in education field and IT sectors. | K 4 |

| Lecture Hrs./Week <br> or <br> Practical Hrs./Week | 5 |  | Credits: | 4 |

## Course Objective

To equip the students for study in Real analysis by introducing further some of advanced topics in Real Analysis.

## Course Outcomes (CO)

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| CO 1 | Understand and use abstract mathematical concepts of <br> derivatives and functions of bounded variation. | K 2 |
| CO 2 | Apply the properties of monotonic functions and <br> continuous functions of bounded variation in the context of <br> real analysis. | K 3 |
| CO 3 | Apply the ideas of total variation and step into the theory <br> of Riemann Stieltjes Integral. | K 3 |
| CO 4 | Analyze the Riemann Integral and Riemann-Stieltjes <br> integral in detail and write complete, correct and coherent <br> proofs. | K 4 |
| CO 5 | Enhance higher order learning and demonstrate how <br> abstract ideas in real analysis can be applied to practical <br> problems. | K 4 |

## Course Objective

The prime objective of this paper is to introduce certain OR techniques such as game theory, sequencing and networking models to help the students to develop logical reasoning for applying mathematical tools to managerial and other life oriented problems.

## Course Outcomes (CO)

On successful completion of the course student will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| CO1 | Recall and apply linear programming techniques to develop and solve <br> simple models of Game theory. | K 2 |
| CO 2 | Determine the optimal sequence of allocation of jobs to machines in a <br> production line by minimizing the idle time. | K 3 |
| CO3 | Comprehend several queuing system models and extend the same to <br> practical situations, develop network models and analyze a project with <br> deterministic and probabilistic activity times. | K 4 |
| CO4 | Identify the importance of stocks, need for holding stocks and determine <br> the optimum order quantity based on the available constraints. | K 4 |
| CO5 | Make constructive decisions and use the resources (labor, capital, <br> materials, machinery) more effectively by analyzing \& applying the <br> techniques of operations research to problems in engineering, industry, <br> management or any business environment. | K 4 |

|  |  | THEORY OF <br> NUMBERS | Semester: | VI |
| Lecture Hrs./Week <br> or <br> Practical Hrs./Week |  |  |  |  |

## Course Objective

This course exposes the elementary basic theory of numbers and several famous functions, related theorems and some unsolved problems about primes to the students in order to enable them to deeper their understanding of the subject.

## Course Outcomes (CO)

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| CO 1 | Understand the concepts of divisibility, congruence, <br> greatest common divisor and prime-factorization. | K 2 |
| CO 2 | Apply the properties of multiplicative functions such as <br> the Euler phi-function and quadratic residues to solve the <br> problems of number theory. | K 3 |
| CO 3 | Demonstrate the concepts of linear congruence and polynomial <br> congruence using Fermat's Theorem and Wilson's Theorem. | K 3 |
| CO 4 | Analyze and solve linear Diophantine equations, <br> congruences of various types and evaluate the unsolved <br> problems about primes. | K 4 |
| CO 5 | Clear competitive exams in banking, insurance, TNPSC <br> and UPSC. | K 3 |

|  |  | FUZZY SET <br> THEORY | Semester: | VI |
| Lecture Hrs./Week <br> or <br> Practical Hrs./Week | 5 |  | 5 |  |

## Course Objective

To enable the learners to obtain basic knowledge in fuzzy set theory.

## Course Outcomes (CO)

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :--- |
| CO 1 | Recall the concepts of crisp sets and fuzzy sets. | K 2 |
| CO 2 | Understand the types and concept of fuzzy sets. | K 2 |
| CO 3 | Analyze the difference between crisp sets and fuzzy sets. | K 4 |
| CO 4 | Understand the concepts of operations on fuzzy sets. | K 2 |
| CO 5 | Apply the concept of fuzzy sets in research and real life <br> problems. | K 3 |

|  |  | DISCRETE | Semester: | VI |
| Lecture Hrs./Week <br> or <br> Practical Hrs./Week | 5 |  | Credits: | 5 |

## Course Objective

In this course a set of topics that are of genuine use in computer science and elsewhere are identified and combined together in a logically coherent fashion, to enable the students to get a good training in these topics which will inevitably lead the students in the direction of clear thinking, sound reasoning and a proper attitude towards the applications of Mathematics in computer science and other related fields.

## Course Outcomes (CO)

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| CO 1 | Understand the basic definitions of logic, lattice theory, <br> graph theory and automata theory. | K 2 |
| CO 2 | Acquire knowledge about discrete structures which include <br> sets, relations, functions, graphs and recurrence relations. | K 3 |
| CO 3 | Analyze how lattices and Boolean algebra are used as <br> tools and mathematical models in the study of networks. | K 4 |
| CO 4 | Apply logically valid forms of arguments to avoid logical <br> errors and to construct mathematical arguments using <br> logical connectives and quantifiers. | K 4 |
| CO 5 | Apply the concepts to the field of computer science, <br> information technology, cryptography and software <br> engineering. | K 3 |

|  |  | GRAPH THEORY | Semester: | VI |
| Lecture Hrs./Week <br> or <br> Practical Hrs./Week | 5 | Credits: | 5 |  |

## Course Objective

Graph theory is a major area of Combinatorics. In this Course we introduce the learners to some basic topics in graph theory.

## Course Outcomes (CO)

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| CO 1 | Recall the basic concepts and definitions of graphs along <br> with types and their examples. | K 1 |
| CO 2 | Demonstrate the concepts of connectivity and line <br> connectivity. | K 3 |
| CO 3 | Compare the features of Eulerian graphs and Hamiltonian <br> graphs. | K 4 |
| CO 4 | Apply the concept of directed graphs to solve network flow <br> problems. | K 3 |
| CO 5 | Relate the graph theory to the real world problems. | K 4 |

|  |  | ADVANCED LEARNER COURSE (OPTIONAL): ADVANCED OPERATIONS RESEARCH - II | Semester: | VI |
| Lecture Hrs./Week or Practical Hrs./Week | - |  | Credits: | 3* |

## Course Objective

The course aims to expose non-linear programming and simulation. Further it helps the student to understand different computational algorithms used in solving non-linear programming problems. The course also enables to schedule projects and build mathematical models to study the real world system.

## Course Outcomes (CO)

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :--- | :--- | :--- |
| CO1 | Understand non-linear programming problems and familiarize <br> different solving procedures | K2\& K3 |
| CO2 | Formulate and solve non-linear programming problems using <br> appropriate techniques and interpret the results. | K3 |
| CO3 | Simulate Various real life probabilistic situations using methods <br> like Monte Carlo simulation | K4 |
| CO4 | Analyze the resources efficiently under various constrains and <br> estimate the probability of completing a project on time. | K4 |
| CO5 | Develop critical and analytical skills that enable to apply <br> optimization techniques constructively to any business environment <br> and draw wise decisions. | K4 |

|  |  | SBE-II: FINANCIAL <br> MATHEMATICS -II | Semester: | VI |
| Lecture Hrs./Week <br> or <br> Practical Hrs./Week | 3 |  | Credits: | 3 |

## Course Objective

The course on financial mathematics focuses on the mathematical properties and relations between concepts of financial and currency markets in investment and other economic activities.

## Course Outcomes (CO)

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :--- | :--- | :---: |
| CO1 | Use a generalized cash-flow model to describe financial transactions. | K2 |
| CO2 | Describe how a loan may be repaid by regular instalments of interest and <br> capital. | K3 |
| CO3 | Analyze straightforward compound interest problems and solve resulting <br> equations of value, including for the implied rate of return. | K4 |
| CO4 | Apply discounted cash flow techniques to investment project appraisal. | K3 |
| CO5 | Communicate the difference in capital budgeting decision tools like Net <br> Present Values, Interval Rates of Return and Discounted Payback <br> Periods. | K3 |

|  |  | SBE-II: <br> CRYPTOGRAPY | Credits: | 3 |
| Lecture Hrs./Week <br> or <br> Practical Hrs./Week | 3 |  | VI |  |

## Course Objective

To enable the learners to explore the basic techniques of modern cryptography and to revisit some mathematical results which are foundations for several modern cryptographic algorithms.

## Course Outcomes (CO)

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| CO 1 | Understand the fundamentals of cryptography including <br> data and advanced encryption standards. | K 2 |
| CO 2 | Learn to encrypt and decrypt messages using block ciphers. | K 2 |
| CO 3 | Acquire knowledge about the uses of RSA crypto system. | K 3 |
| CO 4 | Learn about how to maintain the confidentiality, Integrity <br> and availability of a data. | K 4 |
| CO 5 | Analyze and apply the concepts of public number <br> generation and public key encryption in real life situations. | K 4 |
