ABOUT THE INSTITUTION

A nation's growth is in proportion to education and intelligence spread among the masses. Having this idealistic vision, two great philanthropists late. S.P. Nallamuthu Gounder and Late. Arutchelver Padmabhushan Dr.N.Mahalingam formed an organization called Pollachi Kalvi Kazhagam, which started NGM College in 1957, to impart holistic education with an objective to cater to the higher educational needs of those who wish to aspire for excellence in knowledge and values. The College has achieved greater academic distinctions with the introduction of autonomous system from the academic year 1987-88. The college has been Re-Accredited by NAAC and it is ISO 9001 : 2015 Certified Institution. The total student strength is around 6000. Having celebrated its Diamond Jubilee in 2017, the college has blossomed into a premier Post-Graduate and Research Institution, offering 26 UG, 12 PG, 13 M.Phil and 10 Ph.D Programmes, apart from Diploma and Certificate Courses. The college has been ranked within Top 100 (72nd Rank) in India by NIRF 2021.

ABOUT CONFERENCE

The International conference on “Emerging Trends in Science and Technology (ETIST-2021)” is being jointly organized by Departments of Biological Science, Physical Science and Computational Science - Nallamuthu Gounder Mahalingam College, Pollachi along with ISTE, CSI, IETE, IEE & RIYASA LABS on 27th OCT 2021. The Conference will provide common platform for faculties, research scholars, industrialists to exchange and discuss the innovative ideas and will promote to work in interdisciplinary mode.

CONTRA $\ast\alpha\omega$ -CONTINUOUS FUNCTIONS IN TOPOLOGICAL SPACES

Dr. K.Baby¹ – M.Amsaveni² – C.Varshana³

©NGMC 2021

ABSTRACT: In this paper, we introduce new class of functions namely contra $\ast\alpha\omega$ -continuous function, almost contra $\ast\alpha\omega$ -continuous function. Also relations between contra $\ast\alpha\omega$ continuous function, almost contra $\ast\alpha\omega$ continuous function with other existing contra continuous functions are compared. Finally the properties of the defined functions are examined.

Keywords: contra $\ast\alpha\omega$ -continuous function, almost contra $\ast\alpha\omega$ -continuous function, regular set connected function, ker (A).

1.INTRODUCTION

Devi, Balachandran and Maki introduced the concept of αg - closed sets in topological spaces. Dontchev introduced the concept of generalized semi pre- closed sets in topological spaces. Palaniappan and Rao introduced the concept of regular generalized closed sets in topological spaces. GovindappaNavalagi and Chandrashkarppa introduced the concept of generalized semi pre-regular-closed (gspr- closed) in topological spaces. Arya and Nour introduced the concept of generalized α regular closed sets in topological spaces.

Njastad introduced the concept of α - closed sets in topological spaces. The notion of ω – closed sets are introduced by Sundaram and Sheik John and recently Benchalli et.al studied $\omega\alpha$ - closed set-in topological spaces. Ganambal introduced generalized pre closed sets in topological spaces. Parimala, Udhayakumar, Jeevitha and Biju introduced the concept of $\alpha\omega$ - closed set-in topological spaces.

Dontchev introduced the notion of contra continuous functions in 1996 .J.Dontchevet. al., introduced new class of functions called regular set connected functions. In 1968, M.K. Singalet. al., introduced the concept of almost continuous mapping.

2.PRELIMINARIES

Throughout this paper (X, τ) and (Y, σ) represent topological spaces. For a subset A of a spaces (X, τ) , $cl(A)$, $int(A)$ denote the closure of A and the interior of A respectively.

Definition-2.1

A subset $A \subseteq X$ is called

1. a semi-open set [18] if $A \subseteq \text{cl}(\text{int}(A))$ and a semi-closed if $\text{int}(\text{cl}(A)) \subseteq A$.
2. a α -open set [5] if $A \subseteq \text{int}(\text{cl}(\text{int}(A)))$ and a α -closed set [5] if $\text{cl}(\text{int}(\text{cl}(A))) \subseteq A$.
3. a semi pre-open set (or) β -open set [1] if $A \subseteq \text{cl}(\text{int}(\text{cl}(A)))$ and a semi pre-closed set (or) β -closed set if $\text{int}(\text{cl}(\text{int}(A))) \subseteq A$.
4. a pre-open set [8] if $A \subseteq (\text{int}(\text{cl}(A)))$ and a pre-closed set if $\text{cl}(\text{int}(A)) \subseteq A$.
5. a regular open set [10] if $A = \text{int}(\text{cl}(A))$ and a regular closed set if $\text{cl}(\text{int}(A)) = A$.

Definition-2.2

A subset A of space (X, τ) is called

1. a generalized closed (briefly g-closed) [18] set if $\text{cl}(A) \subseteq U$ and U is open in (X, τ) , the complement of a g-closed set is called a g-open set.
2. a generalized semi pre-regular closed (briefly gspr-closed) [11] set if $\text{spcl}(A) \subseteq U$ and U is regular open in (X, τ) .
3. a generalized pre regular-closed (briefly gpr-closed) [11] set if $\text{pcl}(A) \subseteq U$ whenever $A \subseteq U$ and U is regular open in (X, τ) .
4. a generalized semi pre-closed (briefly gsp-closed) [7] set if $\text{spcl}(A) \subseteq U$ whenever $A \subseteq U$ and U is open in (X, τ) .
5. a regular generalized -closed (briefly rg-closed) [17] set if $\text{cl}(A) \subseteq U$ whenever $A \subseteq U$ and U is regular open in (X, τ) .
6. a α generalized -closed (briefly α g-closed) set [5] if $\alpha\text{cl}(A) \subseteq U$ whenever $A \subseteq U$ and U is open in (X, τ) .
7. a generalized pre-closed (briefly gp-closed) [7] set if $\text{pcl}(A) \subseteq U$ whenever $A \subseteq U$ and U is open in (X, τ) .
8. a generalized semi-closed (briefly gs-closed) set [7] if $\text{scl}(A) \subseteq U$ whenever $A \subseteq U$ and U is open in (X, τ) .
9. a ω - closed set [25] if $\text{cl}(A) \subseteq U$ whenever $A \subseteq U$ and U is semi-open in (X, τ) .
10. a $\alpha\omega$ - closed set [21] if $\omega\text{cl}(A) \subseteq U$ whenever $A \subseteq U$ and U is α -open in (X, τ) .

Definition-2.3

A function $f : (X, \tau) \rightarrow (Y, \sigma)$ is called

1. g-continuous [3] if $f^{-1}(V)$ is g-open in (X, τ) for every open set V of (Y, σ) .
2. rg-continuous [19] if $f^{-1}(V)$ is rg-open in (X, τ) for every open set V of (Y, σ) .
3. gs-continuous [11] if $f^{-1}(V)$ is gs-open in (X, τ) for every open set V of (Y, σ) .
4. α g-continuous [5] if $f^{-1}(V)$ is α g-open in (X, τ) for every open set V of (Y, σ) .
5. gp-continuous [2] if $f^{-1}(V)$ is gp-open in (X, τ) for every open set V of (Y, σ) .

6. gpr-continuous [2] if $f^{-1}(V)$ is gpr-open in (X, τ) for every open set V of (Y, σ) .
7. gsp-continuous[11] if $f^{-1}(V)$ is gsp-open in (X, τ) for every open set V of (Y, σ) .
8. gspr-continuous [11] if $f^{-1}(V)$ is gspr-open in (X, τ) for every open set V of (Y, σ) .
9. $\alpha\omega$ -continuous [21] if $f^{-1}(V)$ is $\alpha\omega$ -open in (X, τ) for every open set V of (Y, σ) .
10. Contra g- continuous [12] if $f^{-1}(V)$ is g-closed set in (X, τ) for every open set V of (Y, σ) .
11. Contra gp- continuous [12] if $f^{-1}(V)$ is gp-closed set in (X, τ) for every open set V of (Y, σ) .
12. Contra gpr-continuous [12] if $f^{-1}(V)$ is gpr-closed set in (X, τ) for every open set V of (Y, σ) .
13. Contra gsp-continuous [12] if $f^{-1}(V)$ is gsp-closed set in (X, τ) for every open set V of (Y, σ) .
14. Contra rg-continuous [12] if $f^{-1}(V)$ is rg-closed set in (X, τ) for every open set V of (Y, σ) .
15. Contra αg -continuous [12] if $f^{-1}(V)$ is αg -closed set in (X, τ) for every open set V of (Y, σ) .
16. Contra gs-continuous [12] if $f^{-1}(V)$ is gs-closed set in (X, τ) for every open set V of (Y, σ) .
17. Almost contra continuous [23] if $f^{-1}(V)$ is closed in (X, τ) for every regular open set V of (Y, σ) .

Definition- 2.4

A function $f : (X, \tau) \rightarrow (Y, \sigma)$ is said to be regular set connected [6] if $f^{-1}(V)$ is clopen in (X, τ) for every regular open set V of (Y, σ) .

Definition- 2.5 [2]

A function $f : (X, \tau) \rightarrow (Y, \sigma)$ is called

1. $\ast\alpha\omega$ -open map if open set U in X , $f(U)$ is $\ast\alpha\omega$ -open in Y .
2. $\ast\alpha\omega$ -close map if closed set U in X , $f(U)$ is $\ast\alpha\omega$ -closed in Y .
3. Pre $\ast\alpha\omega$ - open if for every $\ast\alpha\omega$ - open U in X , $f(U)$ is $\ast\alpha\omega$ - open in Y .
4. Pre $\ast\alpha\omega$ - closed if for every $\ast\alpha\omega$ - closed U in X , $f(U)$ is $\ast\alpha\omega$ - closed in Y .

3. CONTRA $\ast\alpha\omega$ CONTINUOUS FUNCTION

Definition-3.1

A function $f : (X, \tau) \rightarrow (Y, \sigma)$ is said to be contra $\ast\alpha\omega$ continuous if $f^{-1}(V)$ is $\ast\alpha\omega$ -closed set in (X, τ) for every open set V of (Y, σ) .

Theorem-3.2 Every contra continuous is a contra $\ast\alpha\omega$ continuous but not conversely.

Proof: Let V be a open set in (Y, σ) . Since f is contra continuous, $f^{-1}(V)$ is closed in (X, τ) , but every closed set is $\ast\alpha\omega$ closed in (X, τ) , [2] $f^{-1}(V)$ is $\ast\alpha\omega$ closed in (X, τ) . Thus f is contra $\ast\alpha\omega$ continuous.

The converse of the above theorem need not to be true by the following example.

Example-3.3

Let the mapping $f : (X, \tau) \rightarrow (Y, \sigma)$ be defined as $f(a)=c, f(b)=b, f(c)=a$. Let $X = Y = \{a, b, c\}$.

$(X, \tau) = \{\phi, X, \{a\}, \{a, b\}\}$ and $(Y, \sigma) = \{\phi, X, \{a\}, \{a, b\}, \{a, c\}\}$.

$(X, \tau)^c = \{\phi, X, \{b, c\}, \{c\}\}$.

CONTRA $\ast\alpha\omega$ - CONTINUOUS FUNCTIONS IN TOPOLOGICAL SPACES

$\ast\alpha\omega$ closed set of $(X, \tau) = \{\emptyset, X, \{c\}, \{b, c\}, \{a, c\}\}$.

Hence every open set of (Y, σ) are $\ast\alpha\omega$ closed set of (X, τ) but $f^{-1}\{a, c\} = \{a, c\}$ is not in $(X, \tau)^c$. Therefore f is contra $\ast\alpha\omega$ - continuous but not contra continuous.

Theorem-3.4 Every contra $\ast\alpha\omega$ continuous is contra g-continuous (contra gp-continuous) but not conversely

Proof: Let V be a open set in (Y, σ) . Since f is contra $\ast\alpha\omega$ continuous, $f^{-1}(V)$ is $\ast\alpha\omega$ closed in (X, τ) , but every $\ast\alpha\omega$ closed set g-closed (gp-closed) in (X, τ) [2], $f^{-1}(V)$ is g-closed(gp-closed) in (X, τ) . Thus f is contra g-continuous (contra gp-continuous).

The converse of the above theorem need not to be true by the following examples.

Example-3.5

Let the mapping $f: (X, \tau) \rightarrow (Y, \sigma)$ be defined as $f(a)=a, f(b)=b, f(c)=c$. Let $X = Y = \{a, b, c\}$.

$(X, \tau) = \{\emptyset, X, \{a\}, \{b, c\}\}$ and $(Y, \sigma) = \{\emptyset, X, \{a\}, \{b\}, \{a, b\}, \{a, c\}\}$.

$\ast\alpha\omega$ closed set of $(X, \tau) = \{\emptyset, X, \{a\}, \{b, c\}\}$.

g-closed set of $(X, \tau) = \{\emptyset, X, \{a\}, \{b\}, \{c\}, \{a, b\}, \{b, c\}, \{a, c\}\}$. Hence every open set of (Y, σ) are g-closed in (X, τ) but $f^{-1}\{b\} = \{b\}$ is not $\ast\alpha\omega$ closed in (X, τ) . Therefore f is contra g continuous but not contra $\ast\alpha\omega$ continuous.

Example-3.6

Let the mapping $f: (X, \tau) \rightarrow (Y, \sigma)$ be defined as $f(a)=a, f(b)=b, f(c)=c$. Let $X = Y = \{a, b, c\}$.

$(X, \tau) = \{\emptyset, X, \{a, b\}\}$ and $(Y, \sigma) = \{\emptyset, X, \{a\}, \{a, b\}\}$.

$\ast\alpha\omega$ closed set of $(X, \tau) = \{\emptyset, X, \{c\}, \{b, c\}, \{a, c\}\}$, gp-closed set of $(X, \tau) = \{\emptyset, X, \{a\}, \{b\}, \{c\}, \{a, b\}, \{b, c\}, \{a, c\}\}$. Hence every open set of (Y, σ) are gp-closed in (X, τ) but $f^{-1}\{a\} = \{a\}$ is not $\ast\alpha\omega$ closed in (X, τ) . Therefore f is contra gp continuous but not contra $\ast\alpha\omega$ continuous.

Theorem-3.7 Every contra $\ast\alpha\omega$ continuous is contra gpr-continuous (contra gsp-continuous, contra rg-continuous, contra ag-continuous) but not conversely.

Proof: Let V be a open set in (Y, σ) . Since f is contra $\ast\alpha\omega$ continuous, $f^{-1}(V)$ is $\ast\alpha\omega$ closed in (X, τ) , but every $\ast\alpha\omega$ closed set is gpr-closed(gsp-closed, rg-closed, ag-closed)[2] in (X, τ) , $f^{-1}(V)$ is gpr-closed(gsp-closed, rg-closed, ag-closed) in (X, τ) . Thus f is contra gpr-continuous (contra gsp-continuous, contra rg-continuous, contra ag-continuous).

The converse of the above theorem need not to be true are given by the following examples.

Example-3.8

Let the mapping $f: (X, \tau) \rightarrow (Y, \sigma)$ be defined as $f(a)=a, f(b)=b, f(c)=c$. Let $X = Y = \{a, b, c\}$.

$(X, \tau) = \{\emptyset, X, \{a\}, \{b\}, \{a, b\}\}$ and $(Y, \sigma) = \{\emptyset, X, \{a, b\}\}$.

$\ast\alpha\omega$ closed set of $(X, \tau) = \{\emptyset, X, \{c\}, \{b, c\}, \{a, c\}\}$.

gpr-closed set of $(X, \tau) = \{\emptyset, X, \{c\}, \{a, b\}, \{b, c\}, \{a, c\}\}$.

Hence every open set of (Y, σ) are gpr-closed in (X, τ) but $f^{-1}\{a, b\} = \{a, b\}$ is not $\ast\alpha\omega$ closed in (X, τ) .

Therefore f is contra gpr continuous but not contra $\ast\alpha\omega$ continuous.

Example-3.9

Let the mapping $f : (X, \tau) \rightarrow (Y, \sigma)$ be defined as $f(a)=a, f(b)=b, f(c)=c$. Let $X = Y = \{a, b, c\}$.

$(X, \tau) = \{\phi, X, \{a, b\}\}$ and $(Y, \sigma) = \{\phi, X, \{a\}, \{b, c\}\}$.

$*\alpha\omega$ closed set of $(X, \tau) = \{\phi, X, \{c\}, \{b, c\}, \{a, c\}\}$, gsp-closed set of $(X, \tau) = \{\phi, X, \{a\}, \{b\}, \{c\}, \{b, c\}, \{a, c\}\}$. Hence every open set of (Y, σ) are gsp-closed in (X, τ) but $f^{-1}\{a\} = \{a\}$ is not $*\alpha\omega$ closed in (X, τ) .

Therefore f is contra gsp continuous but not contra $*\alpha\omega$ continuous.

Example-3.10

Let the mapping $f : (X, \tau) \rightarrow (Y, \sigma)$ be defined as $f(a)=a, f(b)=b, f(c)=c$. Let $X = Y = \{a, b, c\}$.

$(X, \tau) = \{\phi, X, \{a\}\}$ and $(Y, \sigma) = \{\phi, X, \{a\}, \{a, b\}\}$.

$*\alpha\omega$ closed set of $(X, \tau) = \{\phi, X, \{b\}, \{c\}, \{b, c\}, \{a, c\}, \{a, b\}\}$.

rg-closed set of $(X, \tau) = \{\phi, X, \{a\}, \{b\}, \{c\}, \{a, b\}, \{b, c\}, \{a, c\}\}$. Hence every open set of (Y, σ) are rg-closed in (X, τ) but $f^{-1}\{a, b\} = \{a, b\}$ is not $*\alpha\omega$ closed in (X, τ) . Therefore f is contra rg continuous but not contra $*\alpha\omega$ continuous.

Example-3.11

Let the mapping $f : (X, \tau) \rightarrow (Y, \sigma)$ be defined as $f(a)=a, f(b)=b, f(c)=c$. Let $X = Y = \{a, b, c\}$.

$(X, \tau) = \{\phi, X, \{a\}, \{b, c\}\}$ and $(Y, \sigma) = \{\phi, X, \{a\}, \{b\}, \{a, b\}, \{a, c\}\}$.

$*\alpha\omega$ closed set of $(X, \tau) = \{\phi, X, \{a\}, \{b, c\}\}$, α g-closed set of $(X, \tau) = \{\phi, X, \{a\}, \{b\}, \{c\}, \{a, b\}, \{b, c\}, \{a, c\}\}$. Hence every open set of (Y, σ) are α g-closed in (X, τ) but $f^{-1}\{a, b\} = \{a, b\}$ is not $*\alpha\omega$ closed in (X, τ) . Therefore f is contra α g continuous but not contra $*\alpha\omega$ continuous.

Theorem-3.12 Every contra $*\alpha\omega$ continuous is contra gs-continuous but not conversely.

Proof: Let V be a open set in (Y, σ) . Since f is contra $*\alpha\omega$ continuous, $f^{-1}(V)$ is $*\alpha\omega$ closed in (X, τ) , [2] but every $*\alpha\omega$ closed set is gs-closed in (X, τ) , $f^{-1}(V)$ is gs-closed in (X, τ) . Thus f is contra gs-continuous.

The converse of the above theorem need not to be true by the following example.

Example-3.13

Let the mapping $f : (X, \tau) \rightarrow (Y, \sigma)$ be defined as $f(a)=a, f(b)=b, f(c)=c$. Let $X = Y = \{a, b, c\}$.

$(X, \tau) = \{\phi, X, \{a\}, \{b\}, \{a, b\}\}$ and $(Y, \sigma) = \{\phi, X, \{a\}, \{b, c\}\}$.

$*\alpha\omega$ closed set of $(X, \tau) = \{\phi, X, \{c\}, \{b, c\}, \{a, c\}\}$, gs-closed set of $(X, \tau) = \{\phi, X, \{a\}, \{b\}, \{c\}, \{b, c\}, \{a, c\}\}$. Hence every open set of (Y, σ) are gs-closed in (X, τ) but $f^{-1}\{a\} = \{a\}$ is not $*\alpha\omega$ closed in (X, τ) .

Therefore, f is contra gs-continuous but not contra $*\alpha\omega$ continuous.

Theorem-3.14 Suppose $*\alpha\omega O(X, \tau)$ is closed under arbitrary unions. Then the following are equivalent for a function $f: (X, \tau) \rightarrow (Y, \sigma)$

- (i) f is contra $*\alpha\omega$ continuous.
- (ii) for every closed subset F of Y , $f^{-1}(F) \in *\alpha\omega O(X, \tau)$.
- (iii) for each $x \in X$ and each $F \in C(Y, f(x))$, there exist a set $U \in *\alpha\omega O(X, x)$ such that $f(U) \subseteq F$.

Proof: (i) \Rightarrow (ii) Let f is contra $*\alpha\omega$ continuous. Then $f^{-1}(V)$ is $*\alpha\omega$ closed in X for every open set V of Y .

(ie) $f^{-1}(F)$ is $*\alpha\omega$ open in X for every closed set F of Y . Hence $f^{-1}(F) \in *\alpha\omega O(X)$.

(ii) \Rightarrow (i) follows from the definition.

(ii) \Rightarrow (iii) For every closed subsets F of Y , $f^{-1}(F) \in *\alpha\omega O(X)$ [by (i)]. Then for each $x \in X$ and each $F \in C(Y, f(x))$, there exist a set $U \in *\alpha\omega O(X, x)$ such that $f(U) \subseteq F$.

(iii) \Rightarrow (ii) For every $x \in X$, $F \in C(Y, f(x))$, there exist a set $U_x \in *\alpha\omega O(X, x)$ such that $f(U_x) \subseteq F$. Let F be a closed set of Y and $x \in f^{-1}(F)$. Then $f(x) \in F$, there exist $U \in *\alpha\omega O(X, x)$ such that $f(U) \subseteq F$ which implies $f^{-1}(F) = \cup \{U_x : x \in f^{-1}(F)\}$. Hence $f^{-1}(F)$ is $*\alpha\omega$ open.

Theorem-3.15 If $f: X \rightarrow Y$ is contra $*\alpha\omega$ continuous closed injection and A is open subset of X , then the restriction $(f/A): (X, \tau) \rightarrow (Y, \sigma)$ is contra $*\alpha\omega$ continuous.

Proof: Let V be any closed set in Y . since $f: (X, \tau) \rightarrow (Y, \sigma)$ is contra $*\alpha\omega$ continuous, $f^{-1}(V)$ is $*\alpha\omega$ open in X . $(f/A)^{-1}(V) = f^{-1}(V) \cap A$ is contra $*\alpha\omega$ open in X . Hence $f((f/A)^{-1}(V))$ is $*\alpha\omega$ open in U .

Lemma-3.16[6] The following properties hold for subsets A, B of a space X

- i. $x \in \ker(A)$ if and only if $U \cap A = \emptyset$ for any $F \in C(X, x)$.
- ii. $A \subset \ker(A)$ and $A = \ker(A)$ if A open in x
- iii. If $A \subset B$ then $\ker(A) \subset \ker(B)$

Theorem- 3.17 Suppose that $*\alpha\omega C(X)$ is closed under arbitrary intersection. Then the following are equivalent for a function $f: X \rightarrow Y$.

- i. f is contra $*\alpha\omega$ continuous.
- ii. The inverse image of every closed set of Y is $*\alpha\omega$ open.
- iii. For each $x \in X$ and each closed set B in Y with $f(x) \in B$, there exist a $*\alpha\omega$ open set A in X such that $x \in A$ and $f(A) \subset B$.
- iv. $f(*\alpha\omega\text{-cl}(A)) \subset \ker f(A)$ for every subset A of X .
- v. $*\alpha\omega\text{-cl}(f^{-1}(B)) \subseteq f^{-1}(\ker(B))$ for every subset B of Y .

Proof: From the definition of contra $*\alpha\omega$ continuous (i) \Rightarrow (ii) and (ii) \Rightarrow (i) follows.

(i) \Rightarrow (iii) Let $x \in X$ and B be a closed set in Y with $f(x) \in B$. By (i), it follows that $f^{-1}(Y - B) = X - f^{-1}(B)$ is $*\alpha\omega$ closed and so $f^{-1}(B)$ is $*\alpha\omega$ open.

(ii)⇒(iv) Let A be any subset of X . Let $y \notin \ker f(A)$. Then there exist a closed set F containing y such that $f(A) \cap F = \emptyset$. We have $A \cap f^{-1}(f) = \emptyset$, Hence ${}^*\alpha\omega\text{-cl}(A) \cap f^{-1}(F) = \emptyset$. Thus $f({}^*\alpha\omega\text{-cl}(A)) \subset F = \emptyset$ and $y \notin f({}^*\alpha\omega\text{-cl}(A))$ and hence $f({}^*\alpha\omega\text{-cl}(A)) \subseteq \ker f(A)$.

(iv) ⇒(v) Let B be any subset of Y . By (iv), $f({}^*\alpha\omega\text{-cl } f^{-1}(B)) \subset \ker B$ and ${}^*\alpha\omega\text{-cl } f^{-1}(B) \subset f^{-1}(\ker B)$.

(v)⇒(i) Let B be any open set of Y . By (v), ${}^*\alpha\omega\text{-cl } (f^{-1}(B)) \subset f^{-1}(\ker B) = f^{-1}(B)$, ${}^*\alpha\omega\text{-cl } (f^{-1}(B)) = f^{-1}(B)$. We obtain $f^{-1}(B)$ is ${}^*\alpha\omega$ - closed in X . Hence f is contra ${}^*\alpha\omega$ continuous.

Definition -3.18

A space (X, τ) is ${}^*\alpha\omega$ locally indiscrete if every ${}^*\alpha\omega$ -open subset of X is closed.

Theorem -3.19 If a function $f : (X, \tau) \rightarrow (Y, \sigma)$ is ${}^*\alpha\omega$ continuous and the space (X, τ) is ${}^*\alpha\omega$ locally indiscrete, then f is contra continuous.

Proof: Let V be a open set in (Y, σ) . Since f is ${}^*\alpha\omega$ continuous, $f^{-1}(V)$ is ${}^*\alpha\omega$ -open in X . Since X is locally ${}^*\alpha\omega$ indiscrete, $f^{-1}(V)$ is closed in X . Hence f is contra continuous.

4. Almost Contra ${}^*\alpha\omega$ Continuous Function in Topological Spaces

Definition-4.1

A function $f : (X, \tau) \rightarrow (Y, \sigma)$ is said to be almost contra ${}^*\alpha\omega$ continuous if $f^{-1}(V)$ is ${}^*\alpha\omega$ closed in X for each regular open set V of Y .

Theorem-4.2 Every contra ${}^*\alpha\omega$ continuous function is almost contra ${}^*\alpha\omega$ continuous but not conversely.

Proof: Let V be a regular open set of (Y, σ) . Since f is ${}^*\alpha\omega$ contra continuous, $f^{-1}(V)$ is ${}^*\alpha\omega$ closed in (X, τ) for each regular open set V of Y . Thus f is a almost contra ${}^*\alpha\omega$ continuous.

The converse of the above theorem need not to be true by the following example.

Example-4.3

Let the mapping $f : (X, \tau) \rightarrow (Y, \sigma)$ be defined as $f(a)=a, f(b)=b, f(c)=c$. Let $X = Y = \{a, b, c\}$.

$(X, \tau) = \{\emptyset, X, \{a\}, \{b\}, \{a, b\}\}$ and $(Y, \sigma) = \{\emptyset, X, \{a\}\}$.

Regular open set of $(X, \tau) = \{\emptyset, X, \{a\}, \{b\}\}$, ${}^*\alpha\omega$ closed set of $(X, \tau) = \{\emptyset, X, \{c\}, \{b, c\}, \{a, c\}\}$.

Hence every open set of (Y, σ) are regular open in (X, τ) but $f^{-1}\{a\} = \{a\}$ is not ${}^*\alpha\omega$ closed in (X, τ) .

Therefore f is almost contra ${}^*\alpha\omega$ continuous but not contra ${}^*\alpha\omega$ continuous.

Theorem : 4.4 Let $f : X \rightarrow Y, g : Y \rightarrow Z$ be two functions. If f is almost contra ${}^*\alpha\omega$ continuous and g is regular set connected, then $g \circ f : X \rightarrow Z$ is almost contra ${}^*\alpha\omega$ continuous and almost ${}^*\alpha\omega$ continuous.

Proof: Let $V \in RO(Z)$ Since g is regular set connected $g^{-1}(V)$ clopen in Y . Since f is almost contra ${}^*\alpha\omega$ continuous. $f^{-1}[g^{-1}(V)] = (g \circ f)^{-1}(V)$ is ${}^*\alpha\omega$ open and ${}^*\alpha\omega$ closed. Therefore $(g \circ f)$ is almost contra ${}^*\alpha\omega$ continuous and almost ${}^*\alpha\omega$ continuous.

CONTRA $\ast\alpha\omega$ - CONTINUOUS FUNCTIONS IN TOPOLOGICAL SPACES

Theorem : 4.5 Let $f: X \rightarrow Y$, $g: Y \rightarrow Z$ be two functions. If f is contra $\ast\alpha\omega$ continuous and g is regular set connected, then $g \circ f: X \rightarrow Z$ is $\ast\alpha\omega$ continuous and almost $\ast\alpha\omega$ continuous.

Proof: Let $V \in RO(Z)$ Since g is regular set connected. $g^{-1}(V)$ is clopen in Y . Since f is contra $\ast\alpha\omega$ continuous. $f^{-1}[g^{-1}(V)] = (g \circ f)^{-1}(V)$ is $\ast\alpha\omega$ closed in X . Therefore, $(g \circ f)$ is $\ast\alpha\omega$ continuous and almost $\ast\alpha\omega$ continuous.

Theorem: 4.6 Every regular set connected function is almost contra $\ast\alpha\omega$ continuous but not conversely.

Proof: Let V be any regular open in (X, τ) . Since $f: (X, \tau) \rightarrow (Y, \sigma)$ is regular set connected, $f^{-1}(V)$ is clopen in X and hence $\ast\alpha\omega$ clopen. That is $f^{-1}(V)$ is $\ast\alpha\omega$ open and $\ast\alpha\omega$ closed. Therefore f is almost contra $\ast\alpha\omega$ continuous.

The converse of the above theorem need not to be true by the following example.

Example-4.7

Let the mapping $f: (X, \tau) \rightarrow (Y, \sigma)$ be defined as $f(a)=a$, $f(b)=b$, $f(c)=c$. Let $X = Y = \{a, b, c\}$.

$(X, \tau) = \{\phi, X, \{a\}, \{b\}, \{a, b\}\}$ and $(Y, \sigma) = \{\phi, X, \{a\}\}$.

Regular open set of $(X, \tau) = \{\phi, X, \{a\}, \{b\}\}$, Regular closed set of $(X, \tau) = \{\phi, X, \{b, c\}, \{a, c\}\}$.

Hence every open set of (Y, σ) are regular open in (X, τ) but not regular closed set in (X, τ) . Here $f^{-1}\{a\} = \{a\}$. Therefore f is almost contra $\ast\alpha\omega$ continuous but not regular set connected continuous function.

Theorem-4.8 If $f: X \rightarrow Y$ is an almost contra $\ast\alpha\omega$ continuous closed injection and A is open subset of X , then the restriction $(f/A): X \rightarrow Y$ is almost contra $\ast\alpha\omega$ continuous.

Proof: Let V be a regular closed set in Y . since f is almost contra $\ast\alpha\omega$ continuous, $f^{-1}(V) \in \ast\alpha\omega O(X)$. Since A is open, it follows that $(f/A)^{-1}(V) = A \cap f^{-1}(V) \in \ast\alpha\omega O(X)$. Therefore $(f/A): X \rightarrow Y$ is almost contra $\ast\alpha\omega$ continuous.

Theorem-4.9 If $f: X \rightarrow Y$ is a surjective pre $\ast\alpha\omega$ open(pre $\ast\alpha\omega$ closed) and $g: Y \rightarrow Z$ is a function such that $g \circ f$ is almost contra $\ast\alpha\omega$ continuous, then g is almost contra $\ast\alpha\omega$ continuous.

Proof: Let V be any regular open set in Z . since $g \circ f$ is almost contra $\ast\alpha\omega$ continuous, $f^{-1}(g^{-1}(V)) = (g \circ f)^{-1}(V)$ is $\ast\alpha\omega$ open($\ast\alpha\omega$ closed). Since f is surjective pre $\ast\alpha\omega$ open(pre $\ast\alpha\omega$ closed), $f(f^{-1}(g^{-1}(V))) = g^{-1}(V)$ is $\ast\alpha\omega$ -open($\ast\alpha\omega$ -closed). Therefore g is almost contra $\ast\alpha\omega$ continuous.

Theorem -4.10 If $f: X \rightarrow Y$ and $g: Y \rightarrow Z$ are $\ast\alpha\omega$ continuous and Y is locally indiscrete, then $g \circ f: X \rightarrow Z$ is $\ast\alpha\omega$ continuous.

Proof: Let A be a closed set in Z . since g is $\ast\alpha\omega$ continuous, $g^{-1}(A)$ is $\ast\alpha\omega$ closed in Y and hence open. Since f is $\ast\alpha\omega$ continuous, $(g \circ f)^{-1}(A) = f^{-1}(g^{-1}(A))$ is $\ast\alpha\omega$ open in X . Hence $g \circ f$ is contra $\ast\alpha\omega$ continuous.

5. CONCLUSION

In this paper, we studied the basic definition and preliminaries of topology and we introduced the concept of contra $*\alpha\omega$ continuous function and their properties were discussed. We also introduced the concept of almost contra $*\alpha\omega$ continuous and derived their relationship with contra $*\alpha\omega$ -continuous and other existing functions.

ACKNOWLEDGEMENT

We are thankful to our colleagues who provided expertise that greatly assisted the research. We are also grateful to the librarian for all necessary materials which improved the manuscript significantly. We are also immensely grateful to Dr.M.Vigneshwaran for his comments on the manuscript, that improved the version of the manuscript.

BIOGRAPHY

Dr.K.BABY, Assistant Professor, Department of Mathematics, Kongunadu Arts and Science College, Date of Birth: 26.09.1985, Birth Place: Coimbatore. My area of specialization is topology.

I have teaching experience of 4.5 years of UG and 3 years of PG.

My research experience is of 5 years .

I have qualified my SSLC and Higher Secondary at P.S.G.R Krishnammal girls higher secondary School, Tamilnadu Board Secondary education in 2001 and 2003 respectively. I have completed my B.Sc Mathematics at P.S.G.R Krishnammal Arts and Science College for Women, Bharathiar University in 2006 and M.Sc Mathematics at Kongunadu Arts and Science College Bharathiar University in 2012. My M.Phil and Ph.D research was on General Topology at Kongunadu Arts and Science College, Bharathiar University from 2012 to 2017.
