

<b>Programme Code:</b>	MSC	<b>Programme Title:</b>	Master of Science	
<b>Course Code:</b>	18PPS1E1	<b>Title</b>	<b>Batch:</b>	2018-2020
		Major Elective I: Applied Electronics	<b>Semester:</b>	I
<b>Hrs/Week:</b>	5		<b>Credits:</b>	5

### Course Objective

- To understand the action of semiconductor devices, amplifiers and oscillators

### Course outcomes

K1	CO1	To acquire the basic knowledge in semiconductor devices
K2	CO2	Understand the different types of amplifiers
K3	CO3	Able to design Op-amp Circuits for various practical applications
K4	CO4	Design oscillators and multi-vibrators with the acquired knowledge on electronics

### Syllabus

Unit	Content	Hrs
I	<b>SEMICONDUCTOR DEVICES AND AMPLIFIERS</b> Semiconductor: Basic ideas- CE transistor characteristics - JFET, Depletion MOSFET and Enhancement MOSFET - Characteristics - UJT and Relaxation Oscillator - SCR & SCR as a switch - Principle of amplification - Classification of amplifiers - Common base, Common emitter RC coupled amplifiers and Frequency response - Hybrid parameters and Small signal analysis - Emitter follower - <i>Concept of Power amplification &amp; Classification of Power amplifiers</i> - Transformer coupled class A Power amplifier –Calculation of Efficiency - Class B Push pull amplifier - Complementary symmetry Push pull amplifier – Efficiency calculation - Biasing of FET amplifier - Common source FET amplifier - Common drain FET amplifier.	13
II	<b>FEEDBACK AMPLIFIER &amp; OSCILLATORS</b> Concept of Feedback - Negative feedback - Forms of negative feedback - <i>Effect of negative feedback on bandwidth, distortion, noise and stability</i> - Positive feedback - Barkhausen criterion - Generation of sinusoidal waves by a tuned LC circuit - Classification of oscillators - Hartley oscillator - Colpitts oscillator - Phase shift oscillator– Frequency calculation - Astable, Monostable and Bistable Multivibrators .	13
III	<b>OPERATIONAL AMPLIFIER-I</b> Typical stages of an Op Amp -Ideal Op Amp - Inverting Op Amp - Non inverting Op Amp - Differential Op Amp - Summing Op Amp circuits- Voltage follower circuits-- Voltage to current converter - Sample and hold circuit-- Logarithmic amplifier-Constant current source using Op Amp-Integrator using Op Amp.	13
IV	<b>OPERATIONAL AMPLIFIER-II</b> Differential amplifier – Common mode and Differential mode – Common Mode Rejection Ratio( CMRR)- Differential Amplifier circuits – Common Mode operation – Differential Mode operation – Realization of constant – current source – Comparators – window detector circuits – Schmitt Trigger – Practical Operational amplifier.	13
V	<b>RADIOMETRY AND PHOTOMETRY</b> Radiometric and photometric flux,Efficacy ,Radiometric and photometric Energy,Radiometric and photometric intensity(Definition only) – Common Radiant Profiles – Optical transfer function and Numerical aperture	13

	<b>DISPLAY DEVICES &amp; DETECTORS</b> Light Emitting Diode: Construction – Electrical and Optical Characteristics – Electroluminescent Source: Electroluminescent lighting panel and Display – Classifications and Characteristics of radiation detectors – Detector Noise – Thermal Detectors: Thermocouple- Pyroelectric detectors – External Photo effect Photoelectric Detectors: Photomultiplier, Internal Photo effect Photoelectric Detectors: Photoconductors

<b>Course Code:</b>	18PPS101	<b>Title</b>	<b>Batch:</b>	2018-2020
		Core I: Mathematical Physics	<b>Semester:</b>	I
<b>Hrs/Week:</b>	5		<b>Credits:</b>	4

### Course Objective

- To apply knowledge of mathematical methods in the concepts of Physics

### Course outcomes

K1	CO1	To recollect the basic mathematical relations such as tensors, special functions, wave equations etc
K2	CO2	To apply the correct mathematical formulae to solve the expressions in physics
K3	CO3	To implement the functions and equations in the field of physics
K4	CO4	To evaluate the problems in classical quantum and Electromagnetic field theory

### Syllabus

Unit	Content	Hrs
I	<b>SPECIAL FUNCTIONS</b> Legendre differential equations and Legendre functions - Generating function of Legendre polynomial - Orthogonal properties of Legendre's polynomials - Recurrence formulae for $P_n(x)$ - Bessel's differential equations: Bessel's functions of first kind - To solve $J_{1/2}(x)$ , $J_{-1/2}(x)$ , $J_{3/2}(x)$ and $J_{-3/2}(x)$ - Recurrence formulae for $J_n(x)$ - Generating function of $J_n(x)$ - Hermite differential equation & Hermite polynomials - Generating function of Hermite polynomials - <i>Recurrence formulae for Hermite polynomials</i>	13
II	<b>COMPLEX VARIABLES</b> Analytic function – The necessary and sufficient conditions for $f(z)$ to be analytic: Cauchy Riemann Differential equations in polar form – Cauchy's integral theorem(Cauchy proof only) - Cauchy's integral formula - Taylor's series and Laurent's series - Singularities of an analytic function - Residues and their evaluation - Cauchy Residue theorem –Problems - Evaluation of definite integrals of Trigonometric functions of $\cos \theta$ and $\sin \theta$ .	13
III	<b>LAPLACE &amp; WAVE EQUATIONS</b> Solution of Laplace's equation in Cartesian coordinates - Examples of Two dimensional steady flow of heat - Solution of Laplace's equation in two dimensional cylindrical coordinates – Problems - Solution of Laplace's equation in Spherical polar coordinates – Problems – Diffusion equation or Fourier equation of heat flow - Solution of heat flow equation – Problems.	13
IV	<b>FOURIER INTEGRAL AND TRANSFORMATIONS</b> Fourier Integral – Problems – Fourier's Transform: Infinite Fourier sine and cosine transforms - Properties of Fourier's Transform: Addition theorem, Similarity theorem, Shifting property, Convolution theorem and Parseval's theorem – Problems – Finite Fourier sine and cosine transforms - Problems	13
V	<b>TENSORS, BETA AND GAMMA FUNCTIONS</b> Transformation of co-ordinates - Summation convention - Kronecker delta symbol - Generalised Kronecker delta - Scalars, contravariant and covariant vectors- Tensors of higher ranks - Algebraic operations of tensors – Quotient law - <i>Symmetric and skew symmetric tensors</i> - Beta and Gamma functions: Symmetry property of beta function – Evaluation of beta function – Transformation of beta function - Evaluation of Gamma function - Transformation of Gamma function – Relation between beta and gamma function – Evaluation of Miscellaneous integrals	13
<b>Total contact hours</b>		65

<b>Course Code:</b>	18PPS102	<b>Title</b>	<b>Batch:</b>	2018-2020
		Core II: Classical and Non linear Dynamics	<b>Semester:</b>	I
<b>Hrs/Week:</b>	5		<b>Credits:</b>	4

### Course Objective

- To gain knowledge and understanding of Lagrangian and Hamiltonian formulations of mechanics and to apply them to simple systems.

### Course outcomes

K1	CO1	To understand the relation between symmetry operation and classical conservation laws
K2	CO2	To tackle the new problem and application techniques of classical mechanics to far-flung reaches of science
K3	CO3	To get clear understanding of recent intricate theories of modern physics
K4	CO4	To provide smooth transition from traditional techniques to rapidly growing area of non-linear dynamics and chaos

### Syllabus

Unit	Content	Hrs
I	<b>LAGRANGIAN FORMALISM</b> Constraints and Degrees of freedom - Generalized coordinates: Generalized Displacement, Velocity, Acceleration, Momentum, Force & Potential - Variational techniques and Euler's Lagrange differential equation - Hamilton's Variational principle - Lagrange's equation of motion from Hamilton's principle - Deduction of Newton's second law of motion from Hamilton's principle - Applications of Lagrange's equation of motion: Linear harmonic oscillator - <i>Simple pendulum</i> - Isotropic oscillator - Particle moving under central force - Conservation theorems: Cyclic coordinates - Conservation of Linear momentum - Conservation of energy	13
II	<b>HAMILTONIAN FORMALISM</b> Phase space - Hamiltonian - Hamilton's canonical equation of motion - Significance of H - Deduction of canonical equation from Variational principle - Applications of Hamilton's equation of motion: <i>Simple pendulum</i> - Particle in a central field of force - Hamiltonian of a Charged particle in an electromagnetic field - Principle of least action and proof - Canonical transformations - Generating function and different forms - Poisson brackets: Definition - Equation of motion in Poisson bracket form - Angular momentum and Poisson bracket relations	13
III	<b>HAMILTON JACOBI THEORY</b> Hamilton Jacobi method: H J partial differential equation - Solution of H J equation - Discussion on Hamilton's principle function - Solution of harmonic oscillator problem by H J method - Particle falling freely - H J equation for Hamilton's characteristic function - Kepler's problem solution by H J method - Action and Angle variables - Solution of harmonic oscillator problem by action angle variable method	13
IV	<b>RIGID BODY DYNAMICS &amp; SMALL OSCILLATIONS</b> Euler's theorem - Euler's angles - Rotational kinetic energy of a rigid body - Equations of motion for a rigid body - The motion of symmetric top under the action of gravity - Types of equilibria : Stable & Unstable equilibrium - Formulation of the problem : Lagrange's equations for small oscillations - Properties of T,V and $\omega$ - Normal coordinates & normal frequencies of vibration - Systems with few degrees of freedom : Free vibrations of linear triatomic molecule	13

V	<b>NONLINEAR DYNAMICS</b> Dynamical systems: Linear & Nonlinear forces - Mathematical Implications of nonlinearity: Linear & Nonlinear systems, Linear superposition principle - Working definition of nonlinearity - Effects of Nonlinearity - Linear Oscillators: Linear Oscillators and Predictability: Free Oscillations, Damped Oscillations, Damped & Forced Oscillations – Nonlinear Oscillators : Damped and Driven nonlinear oscillators : Free Oscillations, Damped Oscillations, Primary Resonance & Jump Phenomenon, Secondary Resonances - Nonlinear Oscillations and Bifurcations	13
<b>Total contact hours</b>		65

<b>Programme Code:</b>	MSC	<b>Programme Title:</b>	Master of Science	
<b>Course Code:</b>	18PPS103	<b>Title</b>	<b>Batch:</b>	2018-2020
		Core III: Statistical Mechanics	<b>Semester:</b>	I
<b>Hrs/Week:</b>	5		<b>Credits:</b>	4

### Course Objective

- To understand the concepts of Statistical Mechanics and to apply these concepts to various physical phenomena.

### Course outcomes

K1	CO1	To understand the concept of statistical mechanics
K2	CO2	To study the physical properties of a mechanical system in a situation when description is incomplete.
K3	CO3	To understand the average value of thermodynamic system and get clarity on equilibrium and non-equilibrium system
K4	CO4	To explain the microscopic properties of a system on the basis of the dynamical behavior of its constituent particle and realization of atomic theory of matter

### Syllabus

Unit	Content	Hrs
I	<b>CONCEPTS OF STATISTICAL MECHANICS</b> Phase space – Volume in Phase space – Ensembles – Micro, Canonical ensemble – Canonical ensemble – Grand canonical – ensemble – Uses of ensemble – Liouville's theorem - Postulate of equal a priori probability – Statistical equilibrium – Thermal equilibrium - Mechanical equilibrium – Particle equilibrium – Thermo dynamical quantities : entropy – enthalpy – Helmholtz free energy – Gibb's free energy - Chemical potential - Connection between statistical and thermo dynamical quantities	13
II	<b>CLASSICAL STATISTICS</b> Microstates and Macro states – Classical Maxwell Boltzmann distribution law – Most probable speed , Mean speed , Mean square speed , Root mean square speed - Principle of equipartition energy – Gibbs paradox – Partition function and its correlation with thermodynamic quantities. Partition function and their properties, effect of shifting zero level of energy on partition function, mean energy, specific heat, entropy - <i>comparison of ensemble</i> – Equipartition theorem - Partition function for real gas.	13
III	<b>QUANTUM STATISTICS</b> Transition from classical statistical Mechanics to Quantum Statistical Mechanics – Indistinguishability in quantum statistics – Statistical weight or a priori probability – Matrices – The density matrix – Postulates – Condition for statistical equilibrium – Identical particles and symmetry requirement – Bose - Einstein distribution law – Fermi – Dirac distribution law - Evaluation of Constant $\alpha$ & $\beta$ - <i>Results of all three statistics.</i>	13
IV	<b>APPLICATION OF QUANTUM STATISTICS</b> Photon gas - Black body radiation and Planck radiation – Specific heat of solids – Einstein theory – Debye theory – Bose Einstein condensation – Liquid Helium - Electron Gas – Free electron model and electronic emission – Pauli's theory of Para magnetism – White dwarfs.	13

V	<b>TRANSPORT PROPERTIES</b> Boltzmann transport equation – Thermal conductivity – Viscosity – Brownian movement – Onsager solutions – Fluctuation : Energy, Pressure – Ising model – Bragg William approximation – One dimensional Ising model.	13
<b>Total contact hours</b>		65

		Non Major Elective : Non Conventional Energy Sources	<b>Semester:</b>	II
<b>Hrs/Week:</b>	1		<b>Credits:</b>	2

### Course Objective

- To study the basic concepts and applications of non conventional energy sources

K1	CO1	To recollect the applications of physics in real world
K2	CO2	To understand the principles of physics involving various natural and artificial process
K3	CO3	To implement the basics laws of physics in the field of non conventional energy sources
K4	CO4	To analyze the efficiency of devices and instruments used in the production of energy

### Syllabus

Unit	Content	Hrs
I	<b>SOLAR ENERGY</b> Solar radiation at the earth surface – Physical principles of the conversion of solar radiation into heat – Solar water heating – Solar cooking.	3
II	<b>WIND ENERGY</b> Nature of the wind – Power in the wind – Site selection consideration – Types of wind mechanics: Horizontal – Axial machines – Vertical axis mechanics – <i>Advantages and disadvantages of WESS.</i>	2
III	<b>OCEAN ENERGY</b> Tidal energy – Ocean thermal energy conversion (OTEC) – Methods of ocean thermal electric power generation – Closed cycle OTEC system – Open cycle OTEC system.	2
IV	<b>ENERGY FROM BIOMASS</b> Biomass – Biofuels – Biomass Conversion Technologies: Wet processes – Dry processes – Thermal gasification of Biomass – Classification of Biomass gasifiers.	3
V	<b>GEOTHERMAL ENERGY</b> A typical geothermal field – Estimates of Geothermal power – Nature of Geothermal fields – Geothermal sources – Advantages and disadvantages of Geothermal energy – <i>Applications of Geothermal Energy.</i>	3

<b>Hrs/Week:</b>	1		<b>Credits:</b>	2

### Course Objective

- To apply knowledge of physics in the field of communication systems

### Course outcomes

K1	CO1	To recollect the basics of analog and digital circuit system
K2	CO2	To understand the conversion of analog to digital signals and modern methods for the transmission of signals
K3	CO3	To implement the digital transmission by using recent electronic devices
K4	CO4	To analyze the difference in communicating the signals through various methods

### Syllabus

Unit	Content	Hrs
I	<b>DIGITAL AND DATA COMMUNICATION</b> Elements of Digital and Data Communication - Digital information in communication - Basic block diagram of data communication system – Coding - <i>ASCII coding</i> .	3
II	<b>DATA TRANSMISSION CIRCUITS</b> Data communication system – data communication Topology – Transmission types – Transmission modes – Characteristics of data transmission circuits.	2
III	<b>MODEM</b> Need and Function of modem – Modem for non telephone links - Modem for interconnection – Modem transmission speed – Modem modulation method.	2
IV	<b>NETWORK</b> Network application – Network organization – Gateways routers and bridges – LAN, MAN, WAN.	3
V	<b>TELEMETRY AND ELECTRONIC EXCHANGE, FACSIMILE</b> Basic telemetry system – Classification phone system – Local loop on hook and off hook – Trunk - Super trunk - Hierarchy of a telephone network - Pulse delay – Phone dialing – Phone dialing - Ring back – Operation the central office and loop supervision- pulse dialing and mechanical switching – Facsimile – <i>Basic facsimile operation</i> .	3

		Core II : Quantum Mechanics-I	<b>Semester:</b>	II
<b>Hrs/Week:</b>	5		<b>Credits:</b>	4

### Course Objective

- To understand the basic concepts and formalisms in Quantum mechanics

### Course outcomes

K1	CO1	Gain good understanding of the principles of quantum mechanics
K2	CO2	Relate abstract formalism to matrix and wave mechanics
K3	CO3	Develop deep knowledge on the role of angular momentum and scattering phenomena in modern physics and technology
K4	CO4	Apply the most appropriate approximation method for solving specific problems

### Syllabus

Unit	Content	Hrs
I	<b>MATRIX FORMULATION OF QUANTUM THEORY</b> Matrix algebra – Linear vector space – Hilbert space – orthonormality property of basis vectors – Schwartz inequality – Linear operator – Eigen functions and Eigen values – Hermitian operator – Schmidt orthogonalisation procedure – Postulates of Quantum mechanics – Matrix representation of an operator – Column representation of the wave function – Normalisation and orthogonality of wavefunction in matrix form – Product of two linear transformations - Dual space – Change of basis, similarity and unitary transformations.	13
II	<b>STATIONARY STATES</b> Schrödinger's equation in Cartesian and Spherical coordinates - Three dimensional harmonic oscillator – The rigid rotator with free axis – Eigen function for the rotator – Rigid rotator in a fixed plane - Motion of a particle in a three dimensional square well Potential – The hydrogen atom: Equations and Solutions of $\phi$ , $\theta$ and $R$ -Heisenberg, Schrödinger and Interaction pictures.	13
III	<b>TIME INDEPENDENT PERTURBATION THEORY</b> Perturbation theory for a system with Non-degenerate and Degenerate levels - Stark effects in Hydrogen and two electron atoms - The variation method and its application to Hydrogen molecule - WKB approximation and its validity – <i>Application to barrier penetration.</i>	13
IV	<b>ANGULAR MOMENTUM AND IDENTICAL PARTICLES</b> Algebra of the angular momentum vector components - Ladder operators - Eigen value spectrum and Matrix representation - Angular momentum operator - Addition of two angular momenta and CG coefficients - Application to two electron systems - Parity operator, Symmetric and Antisymmetric wave functions for a system of $n$ identical particles.	13
V	<b>SCATTERING THEORY</b> Scattering amplitude and scattering cross section - Integral equation in terms of Green's function - Born approximation and its validity - Application to screened coulomb potential - Partial wave analysis - Optical theorem - Application to low energy two nucleon scattering	13

<b>Hrs/Week:</b>	5		<b>Credits:</b>	4

### Course Objective

- To develop the basic knowledge about electromagnetic field and plasma physics

### Course outcomes

K1	CO1	To recollect the basic ideas about electric, magnetic fields and fourth state of matter
K2	CO2	To understand the applications of electromagnetic field and plasma physics
K3	CO3	To analyze incompleteness of Ampere's law and completion of Maxwell's equation
K4	CO4	Enhanced skill in solving problems by applying electromagnetic field expressions

### Syllabus

Unit	Content	Hrs
I	<b>ELECTROSTATICS AND MAGNETOSTATICS</b> Concept of charge - Coulomb's law - Gauss law - Multipole expansion of charge distribution - Dielectric and its polarization - Electric displacement $D$ - Polarization of non-polar molecules - Lorentz equation for molecular field - Clausius Mossotti relation - Polarisation of polar molecules - Langevin equation - Debye relation and molecular structure - Current density - Ampere's law of force - Biot Savart law - Ampere's circuital law - Magnetic scalar and vector potential - Application to magnetic dipole	13
II	<b>FIELD EQUATION AND CONSERVATION LAWS</b> Equation of continuity - Displacement current $D$ - Maxwell's equations - Energy in electromagnetic field - Poynting vector - Momentum in electromagnetic fields - Electromagnetic potential $A$ and $\phi$ - Maxwell's equations in terms of electromagnetic potential - Concept of Gauge - Lorentz Gauge - Coulomb Gauge - Retarded potential - Lienard Wiechart potentials	13
III	<b>PROPAGATION AND INTERACTION OF PLANE ELECTROMAGNETIC WAVES</b> EM waves in free space - Propagation of E.M waves in Isotropic dielectrics - Anisotropic dielectrics in conducting media and in ionized media - Boundary conditions - Reflection and Refraction of EM waves - Fresnel's formula - Brewster's law and polarization of E.M.W - Total internal reflection - Reflection from a metallic surface - Propagation of EM waves between conducting planes	13
IV	<b>RELATIVISTIC ELECTRODYNAMICS</b> Four vectors and tensors - Transformation equations for $\rho$ and $J$ - Transformation equation for $A$ and $\phi$ - Electromagnetic field tensor - Transformation equation for $E$ and $B$ - Covariance of Maxwell's equations : Four vector form & four tensor form - Covariance and transformation law of Lorentz force	13

V	<b>FUNDAMENTALS OF PLASMA</b> Occurrence of Plasma in nature - Definition of Plasma - Concept of Temperature - Debye shielding - Plasma parameter - Criteria for Plasma - Relation of Plasma physics to ordinary EM waves - Plasma Oscillations - Fluid equation of motion – Convective derivative – The stress tensor – Collisions – Equation of continuity – Equation of state – Complete set of fluid equations – Fluid drifts perpendicular to B - Fluid drifts parallel to B – Plasma approximation – <i>Applications of Plasma Physics(Simple ideas)</i> .	13

#### Course Objective

- To develop the skill to gain knowledge in Lasers and Non-linear optics

#### Course Outcomes (CO)

K1	CO1	To keep in mind the basic principle and characteristics of Lasers
K2	CO2	To get the idea about the action of various types of Lasers, performance improvement and their applications
K3	CO3	To implement Laser in Non-linear optics
K4	CO4	To review the ideas and concepts of Laser Spectroscopy

#### Syllabus

Unit	Content	Hrs
I	<b>BASIC PRINCIPLES OF LASERS</b> Energy levels - Thermal equilibrium - Relationship between Einstein's coefficients - Condition for large Stimulated emissions - Condition for light amplification - Line shape function - Population inversion - Pumping methods - Threshold condition - Critical population inversion - Line broadening - Cavity configurations - Modes - Laser rate equations for two, three & four level systems	13
II	<b>LASER CHARACTERISTICS</b> Spatial & Temporal coherence - Directionality - Monochromaticity - Intensity <b>TYPES OF LASERS</b> Ruby laser - Nd YAG laser - Helium Neon laser - Carbondioxide laser - Semiconductor diode laser - Excimer laser - Dye laser - Chemical laser - X ray laser - Free electron laser - Fiber laser - <i>Color center laser</i>	13
III	<b>PERFORMANCE IMPROVEMENT OF LASER</b> Q switching - Methods of Q switching - Peak power - Laser amplifiers - Mode locking - Distributed feedback laser <b>APPLICATIONS OF LASER</b> Material working - Isotope separation - Holography - Measurement of distance - Laser in medicine	13
IV	<b>NON-LINEAR OPTICS</b> Harmonic generation - Second harmonic generation - Phase matching Third harmonic generation - Optical mixing - Parametric generation of light - Self focusing of light <b>MULTIPHOTON PROCESSES</b> Multiquantum Photoelectric effect - Twophoton processes (Experiments) - Three photon processes - Second harmonic generation - Parametric generation - Parametric light Oscillator - Frequency up conversion - Phase conjugate optics	13
V	<b>LASER SPECTROSCOPY</b> Rayleigh and Raman scattering - Stimulated Raman effect - Hyper Raman effect (Classical treatment) - Coherent Anti Stokes Raman Scattering - Spin flip Raman Laser - Photo acoustic Raman Spectroscopy - Saturation absorption Spectroscopy - Doppler free two photon Spectroscopy - Multi photon ionization - Single atom detection with lasers - <i>Laser cooling and Trapping of neutral atoms</i>	13
<b>Total contact hours</b>		65

<b>Course Code:</b>	18PPS207	<b>Title</b>	<b>Batch:</b>	2018-2020
		Core VII: Electronic Communications and Cyber security	<b>Semester:</b>	II
<b>Hrs/Week:</b>	5		<b>Credits:</b>	4

### Course Objective

- To develop the scientific skills in the Electronic Communication systems and Cyber security

### Course outcomes

K1	CO1	To understand the various modulation techniques and the generation of microwaves
K2	CO2	To apply the basic physical concepts on satellite communication
K3	CO3	To implement the modulation techniques in the RADAR communication systems
K4	CO4	To know about the concepts of internet cyber security

### Syllabus

Unit	Content	Hrs
I	<b>ANALOG COMMUNICATION</b> Power and energy in a signal-model of communication system- modulation and frequency translation - Amplitude Modulation: DSB-SC, SSB, VSB and conventional AM - Superhetrodyne AM receiver - Frequency Modulation: Modulation index, spectrum and bandwidth, direct generation and demodulation, superhetrodyne FM receiver - Noise: noise power spectral density, white, thermal and shot noise, equivalent noise temperature - Signal to noise ratio and noise figure	13
II	<b>PULSE MODULATION AND DIGITAL COMMUNICATION</b> Pulse Modulation: Sampling theorem, informal justification, pulse amplitude modulation, time division multiplexing and pulse time modulation - Pulse code Modulation: Quantization Error, bandwidth, companding and delta modulation - Data Transmission: Base band and radio frequency transmission, FSK and PSK - Information Theory: Rate and measurement, channel capacity, Noisy and noiseless channel - <i>Shannon's theorem</i>	13
III	<b>MICROWAVE SYSTEMS</b> Microwaves - Multicavity klystron - Reflex klystron - Magnetron - Travelling wave tube <b>SATELLITE SYSTEMS</b> Kepler's law - Orbits - Geostationary orbits - Power systems - Altitude control- Satellite station keeping - Antenna look angles - Limits of visibility- Frequency plans and polarization - Transponder	13
IV	<b>CYBER SECURITY AND CRYPTOGRAPHY</b> Overview of Cyber Security: Confidentiality, Integrity and Availability. Threats: Malicious Software (Viruses, Trojans, Root kits, Worms, Botnets), Memory exploits (Buffer Overflow, Heap Overflow, Integer Overflow, Format String). <i>Cryptography – Authentication, Password System – Windows Security.</i>	13
V	<b>NETWORK SECURITY</b> Network Security – Network Intrusion, Deduction and Prevention Systems, Firewalls. Software Security: Vulnerability Auditing, Penetration Testing, Sandboxing, Control Flow Integrity. Web Security: User Authentication. Legal and Ethical Issues: Cybercrime, Intellectual Property Rights, Copyright, Patent, Trade Secret, Hacking and Intrusion, Privacy, Identity Theft.	13
<b>Total contact hours</b>		65

<b>Course Code:</b>	18PPS208	<b>Title</b>	<b>Batch:</b>	2018-2020
		Core VIII: General Physics Lab I	<b>Semester:</b>	I & II
<b>Hrs/Week:</b>	4		<b>Credits:</b>	4

### Course Objective

- To understand the techniques of advanced physics experiments

### Course outcomes

K3	CO1	To familiarize with the experimental techniques
K4	CO2	To get the idea about the experimental setup and arrangement of device
K5	CO3	To verify the experimental results with theoretical values

### List of experiments:

- Young's modulus - Elliptical fringes - Cornu's method
- Viscosity of a liquid - Mayor's oscillating disc
- Thermal conductivity - Forbe's method
- Temperature coefficient and band gap energy of a Thermistor
- Measurement of Spot size, Divergence & Wavelength of a Laser beam
- Young's modulus - Hyperbolic fringes - Cornu's method
- Specific heat of a liquid - Ferguson's method
- $\lambda$ ,  $d\lambda$  & Thickness of FP etalon – Fabryperot Interferometer
- Rydberg's constant - Hydrogen spectrum
- Refractive index of a liquid & Absorption coefficient of transparent Material –Laser Source
- Rydberg's constant - Solar spectrum
- Hall effect in Semiconductors
- Study of Birefringence – Channel spectrum method or Diffraction – Hartmann's Interpolation
- Stefan's constant
- Biprism – Determination of  $\lambda$  of monochromatic source & thickness of a transparent sheet

### Reference Books

- Worsnop, Flint, (1971). *Advanced Practical Physics*. Asia Publishing house.

<b>Hrs/Week:</b>	4		<b>Credits:</b>	4

### Course Objective

- To understand the working of semiconductor devices, amplifiers and oscillators.

### Course outcomes

K3	CO1	Remember the applications of semiconductor devices
K4	CO2	To get the idea and principles of electronics practically
K5	CO3	To access the action of electronic devices such as diode, transistor, UJT and FET etc.

### List of experiments:

- CRO - Familiarization: Lissajous figures, Measurement of Voltage, Phase and Frequency
- I.C - Regulated power supply
- RC coupled amplifier - Double stage
- Feedback amplifier
- FET amplifier - Common Source
- Emitter follower
- UJT - Characteristics
- FET amplifier - Common Drain
- Phase shift Oscillator using opamp
- Power amplifier - Push Pull
- SCR characteristics
- Astable Multivibrator using 555 timer IC and Op amp
- Power amplifier - Complementary symmetry
- UJT - Relaxation Oscillator
- Wave shaping circuits - Differentiator, Integrator, Clipper and Clamper

<b>Course Code:</b>	18PPS3E2	<b>Title</b>	<b>Batch:</b>	2018-2020
		Major Elective II: Microprocessor & Object-Oriented Programming With C++	<b>Semester:</b>	III
<b>Hrs/Week:</b>	5		<b>Credits:</b>	5

### Course Objective

- To acquire knowledge about microprocessor and object oriented programs

### Course outcomes

K1	CO1	To enhance the knowledge of various instruction set of the Microprocessor Intel 8085
K2	CO2	To understand the method of interfacing of different programmable devices.
K3	CO3	To apply the various C++ functional operators to build a secure program
K4	CO4	To solve problems in Physics based on microprocessor and OOPS

### Syllabus

Unit	Content	Hrs
I	<b>MICROPROCESSOR FUNDAMENTALS</b> 8085 Microprocessor pin diagram & functions - Architecture - Addressing modes - Instruction set - Data transfer instructions - Arithmetic instructions - Logical and Branch instructions - Stack, I/O & Machine control instructions - Subroutine, Conditional Call instructions and return instructions	13
II	<b>MICROPROCESSOR PROGRAMMING &amp; INTERFACING</b> Steps involved in Microprocessor programming - Straight line programs - Looping programs - Mathematical programs - Interfacing with ROM & RAM - I/O interfacing basics - Interfacing with practical I/O ports - Synchronizing I/O data transfers using Interrupts - Address decoding	13
III	<b>PRINCIPLES OF OBJECT-ORIENTED PROGRAMMING</b> Object Oriented Programming Paradigm - Basic concepts of Object Oriented Programming - Benefits of OOP <b>CLASSES &amp; OBJECTS</b> Specifying a Class - Defining Member functions - Nesting of Member functions - Private Member functions - Arrays within a class - Memory allocation for objects - Static data members & Member functions - Arrays of Objects - Objects as function arguments - Friendly functions – Returning objects	13
IV	<b>CONSTRUCTORS &amp; DESTRUCTORS</b> Constructors - Parameterized Constructors - Multiple Constructors in a Class - Copy Constructor - Dynamic Constructor - Destructors <b>OPERATOR OVERLOADING</b> Defining Operator Overloading - Overloading Unary & Binary Operators - Overloading Binary Operators using Friends - Rules for Overloading Operators	13
V	<b>INHERITANCE: EXTENDING CLASSES</b> Defining Derived classes - Single inheritance - Making a Private Member inheritable - Multilevel inheritance - Multiple inheritance - Hierarchical inheritance - Hybrid inheritance - Virtual base classes <b>POINTERS &amp; VIRTUAL FUNCTIONS</b> Pointers to Objects - <b>this</b> Pointer - Pointers to Derived Classes - Virtual functions - Pure virtual functions	13
<b>Total contact hours</b>		65

		Core X: Quantum Mechanics-II	<b>Semester:</b>	III
<b>Hrs/Week:</b>	5		<b>Credits:</b>	4

### Course Objective

- To familiarize with advanced concepts and methodology of quantum mechanics, quantization of fields and central force problems

### Course outcomes

K1	CO1	Acquire thorough knowledge and understanding on the basic principles of quantum mechanics and their applications to various physical and chemical problems
K2	CO2	Understand the effects of special relativity in quantum mechanics and to gain an insight in the quantum field theory
K3	CO3	Apply the concepts of quantum mechanics to quantitatively predict the behavior of physical systems
K4	CO4	Analyse and apply the modern quantum mechanical methods for determining electronic structure of molecules and atoms

### Syllabus

Unit	Content	Hrs
I	<b>TIME DEPENDENT PERTURBATION</b> Schrodinger equation and general solution - Propagator- Alteration of Hamiltonian, transitions and sudden approximation - Perturbation solution for transition amplitude - First order perturbation - Second order perturbation – Harmonic perturbation – Transition to continuum states : Fermi Golden rule - Scattering of a particle by a potential – <i>Absorption and Emission of Radiation</i>	13
II	<b>RELATIVISTIC QUANTUM MECHANICS</b> Klein Gordon equation - Plane wave solutions - Position probability density and current density - Applications to the study of energy levels of electron in a coulomb field - Dirac equation - Probability and Current densities - Alpha , Beta matrices and their properties - Plane wave solutions for Dirac equation - Negative energy	13
III	<b>RELATIVISTIC QUANTUM MECHANICS</b> Electromagnetic potentials: Magnetic moment of the electron – Existence of electron spin - Spin-orbit energy - Zitterbewegung – Dirac's equation of a central field force (H-Atom) – Solution of Dirac's equation of a central field force (H-Atom) –Hydrogen spectrum according to Dirac equation – Covariant formulation of Dirac equation - Properties of Gamma matrices	13
IV	<b>QUANTIZATION OF FIELDS</b> Field - Quantization procedure for particles - Classical formulation of Lagrangian and Hamiltonian equations of motions - Quantum equation of the field - Quantization of the Schrodinger equation - Klein Gordon field - The Dirac field - Creation, annihilation and number operators	13
V	<b>MANY ELECTRON SYSTEMS</b> One particle central force problem - Non interacting particles and separation of variables - Reduction of the two particles problems - Two particles rigid rotor - Hydrogen atom - Bound state Hydrogen atom wave functions -Hydrogen like orbitals – LCAO - V.B Theory – Hartree Method - Hartree Fock, SCF method.	13

		Core XI : Molecular Spectroscopy	<b>Semester</b>	III
<b>Hrs/Week:</b>	5		<b>Credits:</b>	4

### Course Objective

- To develop the skill to gain knowledge in Molecular Spectroscopy

### Course Outcomes

K1	CO1	To recollect Symmetry operations and learn about Group theory
K2	CO2	To understand the origin of Microwave, Raman and IR spectroscopy
K3	CO3	To deploy the conditions for resonance in NMR, ESR, NQR and Mossbauer Spectroscopy
K4	CO4	To review the theory and applications of NMR, ESR, NQR and Mossbauer Spectroscopy

### Syllabus

Unit	Content	Hrs
I	<b>MOLECULAR SYMMETRY &amp; GROUP THEORY</b> Group - Group Multiplication table - Classes - Symmetry elements, Symmetry operations & Point groups - Symmetry operations on molecular motions Reducible & Irreducible representations - The Great orthogonality theorem - Symmetry species & Character tables - $C_{2v}$ & $C_{3v}$ Representations of a group - Number of normal modes of various symmetry types - <i>Symmetry of group vibrations</i>	13
II	<b>MICROWAVE SPECTROSCOPY</b> Theory of Microwave Spectroscopy - Classification of molecules - Diatomic molecule and the measurement of internuclear distance - Linear triatomic molecules and the determination of the bond lengths - Microwave spectra of Symmetric top molecules - Experimental technique	13
III	<b>RAMAN SPECTROSCOPY</b> Quantum theory of Raman effect - Classical theory of Raman effect - Pure Rotational Raman spectra - Vibrational Raman spectra - Structure determination from Raman & IR spectroscopy - Techniques & Instrumentation <b>IR SPECTROSCOPY</b> Vibrating diatomic molecule - Diatomic Vibrating Rotator - Vibrations of Polyatomic molecules - Fourier transform IR spectroscopy	13
IV	<b>RESONANCE SPECTROSCOPY</b> Theory of Nuclear Magnetic Resonance - Conditions for Resonance - Bloch equation and their Steady State solutions - Chemical shift - Experimental techniques: Continuous & Pulse method - Applications - Concept and theory of Electron Spin Resonance - Relaxation phenomenon - Experimental technique - <i>Applications</i>	13
V	<b>NQR &amp; MOSSBAUER SPECTROSCOPY</b> Theory of NQR - Energy levels for molecules of axial and non axial symmetry - Experimental techniques and applications - Principle and theory of Mossbauer effect - Mossbauer instrumentation - Applications - Electronic spectroscopy - Frank Condon principle - Vibrational coarse structure of electronic spectra - Fortrat diagram - Applications of electronic spectra to transition metal complexes	13
<b>Total contact hours</b>		65

		Major Elective III: Thin film & Nano science	<b>Semester:</b>	IV
<b>Hrs/Week:</b>	5		<b>Credits:</b>	5

### Course Objective

- To develop the knowledge about fundamentals of Thin Film and Nano science

### Course outcomes

K1	CO1	To understand the concepts of Thin Films
K2	CO2	To study the design of different synthesis methodologies of thin film and nanoscience
K3	CO3	To familiarize with the basics of Nanotechnology and Quantum structure
K4	CO4	To understand the characteristic techniques of various analysis

### Syllabus

Unit	Content	Hrs
I	<b>Thin film</b> Nature of thin film, Thermodynamics of nucleation, Film growth, Deposition parameters & grain size, Epitaxy, Incorporation of defects, Impurities in thin films. <b>Deposition Techniques:</b> <b>Physical Vapour deposition:</b> Thermal Evaporation, RF Sputtering, <b>Chemical Vapour deposition:</b> Pyrolysis, <b>Chemical deposition:</b> Chemical Bath deposition.	13
II	<b>Properties of thin films</b> <b>Optical properties:</b> Reflection, Transmission, Absorption, Energy band gap, Transition. <b>Electrical properties:</b> Sheet resistance, Measurement of sheet resistance, Temperature co-efficient of resistance (TCR), Influence of thickness on resistivity, Hall effect and Magneto resistance <b>Application: Integrated circuits</b>	13
III	<b>Nanoscience</b> Introduction - classification of quantum structure – quantum confinement- Nanoscale architecture - <b>Summary of electronic properties of atoms and solids:</b> Free electron model and energy bands, Electronic conduction Electronic density of states- Effects of Nanometre length scale- <b>How nanoscale dimension affect properties:</b> Structural properties, Thermal properties, chemical properties, Mechanical properties, Magnetic properties, Optical properties, Electronic properties, Biological systems.	13
IV	<b>Structure and properties of Nanoparticles</b> <b>Metal nanoclusters:</b> Magic numbers, Geometric structure, Electronic structure, Reactivity, Magnetic properties. <b>Semiconducting nanoparticles:</b> Optical properties, Photo fragmentation, coulombic explosion <b>Carbon nanostructures:</b> Introduction- Carbon nanoclusters-carbon nanotubes-properties-Application.	13
V	<b>Synthesis and Characterization of Nanoparticles</b> <b>Top down approach (Physical method):</b> Lithography-Ball milling-Laser induced evaporation – Pulsed laser evaporation <b>Bottom up approach (Chemical method):</b> Sol-gel process-Self assembly-Solvo thermal process- Electro chemical synthesis- Thermolysis. <b>Characterization:</b> XRD – Particle size determination-Spectroscopy (IR and Raman)-UV spectroscopy-Photo luminescence spectroscopy.	13
	<b>Total contact hours</b>	65

		Core XII: Condensed Matter Physics	<b>Semester:</b>	IV
<b>Hrs/Week:</b>	5		<b>Credits:</b>	4

### Course Objective

- To provide coherent perspective of the physical concepts and theories related with the characterization of materials

### Course outcomes

K1	CO1	Provide an in-depth knowledge of structure of crystals
K2	CO2	Analyze the different properties like electric, magnetic and thermal and develop the skills for research
K3	CO3	Acquire deep understanding in the field of material science
K4	CO4	To emphasize the applications of superconductors in industry and medical fields

### Syllabus

Unit	Content	Hrs
I	<b>GEOMETRY OF CRYSTALS</b> Basis of Crystal structure – Unit cell – Primitive cell – Symmetry operations – Translation operations, Point operations & Hybrid operations – Crystal types – Two and three dimensional crystal lattices – Common crystal structures – Indices of a lattice direction and a lattice plane – Crystal bonding – Primary bonds – Covalent, Metallic, Ionic bonding - Van der Waals bond – Hydrogen bond (formation & properties) – Bond energy of NaCl molecule – Calculation of Lattice energy of ionic crystal – Calculation of Madelung constant of ionic crystals – Reciprocal lattice – Geometrical construction of Reciprocal lattice – Bragg’s law – Laue’s interpretation of X ray diffraction by crystals – Measurement of diffraction patterns of crystals – Ewald construction – Experimental methods – <i>Point defects, Dislocations and Color centers(Basic ideas only)</i>	13
II	<b>LATTICE VIBRATIONS OF SOLIDS &amp; THERMAL PROPERTIES</b> One line of atoms – the linear diatomic lattice – Quantization of lattice vibrations – Experimental determination of dispersion relation - Inelastic scattering of neutrons - The specific heat – Lattice specific heat – Classical theory - Einstein theory – The Debye theory – Born’s modification – Thermal conductivity – Lattice thermal conductivity – Phonon mean free path – The Umklapp processes	13
III	<b>FREE ELECTRON THEORY AND BAND THEORY OF SOLIDS</b> Classical free electron theory of Drude-Lorentz – Sommerfeld quantum theory (Energy levels in one and three dimensions) – Fermi Dirac distribution – Density of states – Fermi energy – Wave functions in a periodic lattice and the Bloch theorem – Behaviour of an electron in a periodic potential (Kronig Penney model) – Brillouin zone – Number of possible wave functions in a band - Motion of electrons in one dimensional periodic potential (crystal momentum, velocity, effective mass, negative effective mass and holes)	13

IV	<b>FERRO ELECTRIC AND MAGNETIC PROPERTIES OF SOLIDS</b> Ferroelectric crystals – Properties of Rochelle salt and BaTiO <sub>3</sub> - Polarization Catastrophe – Ferroelectric domains –Piezoelectricity – Langevin’s theory of Diamagnetism and Para magnetism – Quantum theory of Diamagnetism and Para magnetism – Cooling by adiabatic demagnetization - Weiss theory of Ferromagnetism - Ferromagnetic domains – Neel model of Anti ferromagnetism – <i>Neel model of Ferrimagnetism</i>	13
V	<b>SUPERCONDUCTORS</b> Mechanism of Superconductors – Effects of magnetic field – Critical current – Meissner effect – Type I and Type II Superconductors - London equations - Thermodynamics of Superconductors - BCS theory - Quantum tunneling - Josephson’s tunneling - Theory of AC & DC Josephson effect - High temperature Superconductors	13

<b>Course Code:</b>	18PPS413	<b>Title</b>	<b>Batch:</b>	2018-2020
		Core XIII: Nuclear & Particle Physics	<b>Semester:</b>	IV
<b>Hrs/Week:</b>	5		<b>Credits:</b>	4

### Course Objective

- To study the nuclear structure and properties of nuclei through nuclear models.

### Course outcomes

K1	CO1	Understand the basic properties and structure of nucleus and nuclear reactions
K2	CO2	Analyze the properties and significance of stable nucleus through different types of nuclear models
K3	CO3	Elucidate the latest development in the classification of elementary particles like quarks, Higgs bosons
K4	CO4	Develop skills in solving problems in nuclear physics and pave a way to research in nuclear physics

### Syllabus

Unit	Content	Hrs
I	<b>TWO BODY PROBLEM AND NUCLEAR FORCES</b> Deuteron - Properties - Ground state of Deuteron - Neutron Proton scattering at low energies - Scattering length and effective range - Spin dependence of n p forces - Tensor forces - Exchange forces - Nuclear forces - Properties of nuclear forces - Yukawa theory of nuclear forces	13
II	<b>NUCLEAR MODELS</b> Liquid drop model - Shell model - Magic numbers - Magnetic moments and the Shell model - Prediction of angular momenta of nuclear ground states by Shell model - Collective model - Vibrational and Rotational states - <i>Elementary ideas of Unified and Optical model</i>	13
III	<b>NUCLEAR DISINTEGRATION</b> Law of radioactive decay - Half life and Mean life of an radioactive nuclide- Alpha ray emission - Gamow's theory of alpha decay - Alpha ray energies and fine structure - Spontaneous alpha particle disintegration energy - Beta decay- General features of beta ray spectrum - Fermi's theory of beta decay - Forms of interaction and selection rules- Parity in beta decay - Electron capture - Gamma decay - Absorption and interaction of Gamma ray with matter- Internal conversion - Angular correlation in gamma emission.	13
IV	<b>NUCLEAR FISSION AND FUSION REACTORS</b> Introduction- Mass and energy distribution of fission fragments - Neutron emission by fission process - Prompt and delayed neutrons - Theory of nuclear fission and liquid drop model - Nuclear chain reactions - Controlled fission : Nuclear reactors - Nuclear fusion: Introduction - Fusion reaction - Thermonuclear reaction as source of stellar energy - Controlled thermonuclear reactors.	13

V	<b>ELEMENTARY PARTICLES</b> General classification of Elementary particles - Conservation law and selection rules for production and decay of particles - CPT theorem - Hadron classification according to Eight foldway - Gellmann Okuba mass formula for Baryons - Quarks : The original quark model, charm and other developments – Colored quarks or quantum chromodynamics- Electroweak theory and the standard model- Grand Unification theory and supersymmetry- String theory : A new perspective	13

#### Course objective

- To become familiar with the techniques of advanced General Experiments.

#### Course outcomes

K3	CO1	Become familiar with techniques of advanced general experiments
K4	CO2	Impart the broad knowledge of experimental methods and measurement techniques
K5	CO3	Familiarize analytical calculations

#### List of Experiments:

- Copper Arc Spectra – CDS
- $\lambda$ ,  $d\lambda$  of a Monochromatic source and Thickness of a Mica sheet - Michelson's Interferometer
- Zeeman Effect
- Magnetic Susceptibility - Quincke's Method
- Resistance of a Semiconductor – Four Probe Method
- Iron Arc Spectra – CDS
- Velocity of Sound in liquid- Ultrasonic Diffraction
- Magnetic Susceptibility- Guoy's Method
- Magnetoresistance
- BH Curve – Hysterisis - Standard Solenoid
- Brass Arc Spectra - CDS
- $e/m$  - Millikan's oil drop method
- Polarimeter - Specific rotation of optically active substances
- Planck's constant – Photovoltaic cell and V-I characteristics of solar cell
- Optical Fibre – Numerical aperture, Attenuation, Particle size and  $\lambda$

### Course Objective

- To know the action and applications of operational amplifier, and to become familiarize with 8085 microprocessor

### Course outcomes

K3	CO1	Gain knowledge and understanding of the components and equipments
K4	CO2	Design analog circuits, make measurements, analyze and interpret the experimental data.
K5	CO3	Use the 8085 microprocessor for interfacing devices.

### List of Experiments:

- Parameters of Operational amplifier
- Inverting, Non Inverting, Differential amplifier, Integrator and Differentiator- Op Amp
- Schmitt trigger, Scale changer, Phase changer - Op Amp
- Constant current source - Op Amp
- Microprocessor - Addition, Subtraction, Multiplication, Division & Conversion of Number systems
- Simple and Regenerative Comparators – Op Amp
- Digital to Analog converter - Op Amp
- Adder, Subtractor, Current to Voltage converter and Voltage to Current converter-Op Amp
- Low pass, Band pass & High pass filters - Op Amp
- Microprocessor - Interfacing I
- Window Detector – Op Amp
- Analog to Digital converter - Op Amp
- Solving first order simultaneous equations of two variables- Op Amp
- Function Generator - Op Amp
- Microprocessor - Interfacing II

#### Course Objective

- To acquire basic knowledge in object oriented programming

#### Course outcomes

K3	CO1	To understand the concepts and benefits of OOPs
K4	CO2	To analyze the functions of various C++ operators
K5	CO3	To apply the C++ language to solve problems in Physics.

#### List of Experiments:

- Class implementation.
- Arrays within a Class.
- Static data members and member function.
- Arrays of Objects
- Friend function.
- A function friendly to two classes.
- Overloaded Constructors.
- Implementation of Destructors.
- Overloading Unary operator.
- Overloading Binary operator.
- Single Inheritance.
- Hybrid inheritance.
- Virtual base class.
- Pointers to derived objects.
- Virtual functions.

**Course Objective:**

To promote higher education and to encourage students to take up either theoretical or experimental research.

**Course Outcome:**

The students after completion of their project work will be able to

CO1: Deeply understand the fundamental principles in the chosen field of interest.

CO2: Perform an effective literature search and then apply the appropriate laboratory and computational skills to conduct research.

CO3: Collect, data, analyse and prepare report of his/her findings.

CO4: Effectively defend the results of the work.
