ME-Major Elective    NME- Non Major Elective

<b>Department</b>	Mathematics
-------------------	-------------

**List of Electives:**

1. Magneto Hydro Dynamics
2. Stochastic Differential Equations
3. Algebraic Number Theory
4. Algebraic Topology
5. Fuzzy Logic and Fuzzy Sets
6. MATLAB (Theory & Practical)
7. Latex (Theory & Practical)
8. Differential Geometry
9. Cryptography
10. Distribution Theory.

**List of Non Major Electives**

1. Mathematical Statistics & Techniques
2. Mathematics in Finance

<b>Course</b>	M.Sc	<b>Effective From the Year :</b> 2015
<b>Subject code : 15PMS101</b>		
<b>Title : ALGEBRA</b>		
<b>Hrs/ Week</b>	6	<b>Credits : 4</b>
<b>Objectives</b>	To enable the students to learn several advanced concepts in algebra which have wider applications in higher analysis, topology, theory of numbers, geometry, physics and chemistry etc. This paper is designed in such a way that a student can realize the importance of the topics like Sylow's theorems, polynomial rings, extension of fields and Galois theory.	
<b>Unit</b>	<b>Contents</b>	<b>Hrs</b>
<b>Unit-I</b>	Sylow's Theorem and Inner Product Spaces.	16 hours
<b>Unit-II</b>	Polynomial Rings, Polynomials over the Rational field and Polynomial Rings over Commutative Rings.	16 hours
<b>Unit-III</b>	Extension Fields and Finite Fields.	15 hours
<b>Unit-IV</b>	Roots of Polynomials and More about roots.	16 hours
<b>Unit-V</b>	The Elements of Galois theory.	15 hours
<b>Text Book</b>	Herstein I.N. (2010), <i>Topics in Algebra</i> , 2 <sup>nd</sup> Edition, Wiley India Pvt. Ltd., New Delhi.	
<b>Reference Books</b>	<ol style="list-style-type: none"> <li>1. John B. Fraleigh (2003), <i>A First Course in Abstract Algebra</i>, Narosa Publishing House, New Delhi.</li> <li>2. Surjeet Singh, Qazi Zameeruddin(2006), <i>Modern Algebra</i>, Vikas Publishing House Pvt. Ltd., Delhi.</li> <li>3. Bhattacharyya P.B, Jain K, and Nagpaul S.R (2009), <i>Basic Abstract Algebra</i>, Cambridge University Press, New York.</li> </ol>	

<b>Department</b>	Mathematics	
<b>Course</b>	M.Sc	<b>Effective From the Year : 2015</b>
<b>Subject code : 15PMS102</b>		
<b>Title : REAL ANALYSIS</b>		
<b>Hrs/ Week</b>	6	<b>Credits : 4</b>
<b>Objectives</b>	The aim of this syllabus is to aid learners in attaining a broad understanding of analysis techniques that are the basic stepping-stones to contemporary research. It is assumed that learners are familiar with the subject matter of the undergraduate analysis courses. This syllabus enables the learners to learn and understand in depth sequence and series of functions, functions of several variables and differential forms. Also study Lebesgue integral and Lebesgue measure.	
<b>Unit</b>	<b>Contents</b>	<b>Hrs</b>
<b>Unit-I</b>	<b>Riemann-Stieltjes Integral:</b> Definition and Existence of the Integral – Properties of the Integral – Integration and Differentiation – Integration of Vector-valued Functions – Rectifiable Curves.	15 hours
<b>Unit-II</b>	<b>Sequences And Series Of Functions:</b> Uniform convergence – Uniform Convergence and Continuity – Uniform Convergence and Integration – Uniform Convergence and Differentiation – Equicontinuous Families of Functions – The Stone-Weierstrass Theorem.	16 hours
<b>Unit-III</b>	<b>Functions of Several Variables:</b> Linear Transformations – The Contraction Principle –The Inverse Function Theorem – The Implicit Function Theorem – Determinants – Derivatives of Higher Order – Differentiation on Integrals.	16 hours
<b>Unit-IV</b>	<b>Lebesgue Measure:</b> Lebesgue Outer Measure – The $\sigma$ -Algebra of Lebesgue Measurable sets– Lebesgue Measurable Functions.	15 hours
<b>Unit-V</b>	<b>Lebesgue Integral:</b> The Lebesgue integral of bounded Measurable function over a set of finite measure – The Lebesgue Integral of a Measurable nonnegative function –The general Lebesgue integral.	16 hours
<b>Text Book</b>	1. Walter Rudin, (2013), <i>Principles of Mathematical Analysis</i> , McGraw Hill.	

	<p>New York. For units I-III: Chapters 6, 7, 9.</p> <p>For Unit 1: Chapter 6.  Unit 2: Chapter 7.  Unit 3: Chapter 9 Except Differentiation &amp; The Rank Theorem.</p> <p>2. Royden H.L. and Fitzpatrick P.M. (2010), <i>Real Analysis</i>, Fourth Edition, Pearson Education, Inc., Publishing as Prentice Hall.</p> <p>For Unit 4: Sections 2.1,2.2,2.3, 3.1,3.2.</p> <p>Unit 5: Sections 4.1,4.2,4.3,4.4.</p>
<p><b>Reference Book</b></p>	<ol style="list-style-type: none"> <li>1. R.G.Bartle,(1976), <i>Elements of Real Analysis</i>,2<sup>nd</sup> Edition, John Wiley and Sons, New York.</li> <li>2. W.Ruddin,(1986), <i>Real and Complex Analysis</i>,3<sup>rd</sup> Edition, McGraw-Hill, New York.</li> </ol>

<b>Department</b>	Mathematics	
<b>Course</b>	M.Sc	<b>Effective From the Year : 2015</b>
<b>Subject code : 15PMS103</b>		
<b>Title : COMPLEX ANALYSIS</b>		
<b>Hrs/ Week</b>	6	<b>Credits : 4</b>
<b>Objectives</b>	<p>This paper provides a transition from undergraduate elementary results to postgraduate advanced topics and enables the learners</p> <ol style="list-style-type: none"> <li>1) to understand and to evaluate the definite integrals in an easy and effective way using calculus of residues.</li> <li>2) to get a deeper understanding in the advanced topics such as harmonic functions, Infinite products and Normal families. Also it motivates the learners to take up research in the field of Complex Analysis.</li> </ol>	
<b>Unit</b>	<b>Contents</b>	<b>Hrs</b>
<b>Unit-I</b>	<b>The General form of Cauchy's Theorem:</b> Chains and Cycles – Simple Connectivity – Homology – The General Statement of Cauchy's Theorem – Proof of Cauchy's Theorem – Locally Exact Differentials – Multiply Connected Regions.	16 hours
<b>Unit-II</b>	<b>The Calculus of Residues and Harmonic Functions:</b> The Residue Theorem – The Argument Principle – Evaluation of Definite integrals – Definition and Basic Properties of Harmonic Functions – The Mean Value Property.	15 hours
<b>Unit-III</b>	<b>Series and Product Developments:</b> Poisson's Formula – Schwarz's Theorem – The Reflection Principle – Weierstrass's Theorem – The Taylor Series – The Laurent Series.	15 hours
<b>Unit-IV</b>	<b>Partial Fractions and Factorization and Entire Functions:</b> Partial Fractions – Infinite Products – Canonical Products – The Gamma Function, Zensen's Formula.	16 hours
<b>Unit-V</b>	<b>Normal Families and Elliptic Functions:</b> Equi-continuity – Normality and Compactness, Arzela's Theorem – Families of Analytic Functions – Simply Periodic Functions - Representation by Exponentials – The	16 hours

	Fourier Development – Doubly Periodic Functions – The Period Module – Unimodular Transformations .

## CONTENTS:

- UNIT I : Chapter 4: Sections 4.1 – 4.7  
UNIT II : Chapter 4: Sections 5.1, 5.2, 5.3, 6.1 and 6.2.  
UNIT III : Chapter 4: Sections 6.3, 6.4, 6.5.  
Chapter 5: Sections 1.1, 1.2, 1.3.  
UNIT IV : Chapter 5: Sections 2.1, 2.2, 2.3, 2.4.  
Chapter 5: Sections 3.1.  
UNIT V : Chapter 5: Sections 5.1, 5.2, 5.3, 5.4.  
Chapter 7: Sections 1.1, 1.2.  
Chapter 7: Sections 2.1, 2.2.

<b>Title : ORDINARY DIFFERENTIAL EQUATIONS</b>		
<b>Hrs/ Week</b>	6	<b>Credits : 4</b>
<b>Objectives</b>	<p>Differential equations play an important role in science, engineering and social sciences. Many phenomena in these branches of knowledge are interpreted in terms of differential equations and their applications. This paper helps the students to</p> <ol style="list-style-type: none"> <li>i. learn linear equations and systems,</li> <li>ii. study the existence and uniqueness of solutions of initial value problems,</li> <li>iii. find solution by various methods,</li> <li>iv. understand the results of oscillation and boundary value problems.</li> </ol>	
<b>Unit</b>	<b>Contents</b>	<b>Hrs</b>
<b>Unit-I</b>	Linear differential equations of higher order	16 hours
<b>Unit-II</b>	Solutions in power series (Except 3.1)	15 hours
<b>Unit-III</b>	Systems of Linear Differential Equations (Except 4.1)	15 hours
<b>Unit-IV</b>	Existence and uniqueness of solutions; and Oscillations of second order equations (Except 5.5 to 5.8 & 6.6)	16 hours
<b>Unit-V</b>	Boundary Value problems (Except 7.4)	16 hours
<b>Text Book</b>	Deo S. G. and Raghavendran . V (1990), <i>Ordinary Differential Equations and stability Theory</i> , Tata McGraw Hill Publishing company Limited.	
<b>Reference Book</b>	<ol style="list-style-type: none"> <li>1. Martin H.(1985), <i>Ordinary Differential Equations</i>, Tata McGraw Hill Publishing company Limited.</li> <li>2. Coddington E. A and Levinson N.,(1955),<i>Theory of Ordinary Differential Equations</i>, McGraw Hill, New York.</li> </ol>

<b>Course</b>	M. Sc	<b>Effective From the Year :2015</b>
<b>Subject code : 15PMS1E1</b>		
<b>Title : MAT LAB</b>		
<b>Hrs/ Week</b>	4	<b>Credits : 3</b>
<b>Objectives</b>	To make students to learn the software in a friendly and non- intimidating fashion and helps them to solve the numerous sample problems in Mathematical sciences as a new users of MATLAB.	
<b>Unit</b>	<b>Contents</b>	<b>Hrs</b>
<b>Unit-I</b>	Starting with MATLAB – Creating arrays- Mathematical operations with arrays.	11 hours
<b>Unit-II</b>	Scripts files- Functions and function files.	11 hours
<b>Unit-III</b>	Two-dimensional plots- Three- dimensional plots.	10 hours
<b>Unit-IV</b>	Programming in MATLAB.	10 hours
<b>Unit-V</b>	Polynomial - Curve fitting and interpolation.	10 hours
<b>Text Book</b>	Amos Gilat (2004), <i>MATLAB An Introduction with Application</i> , John Wiley & Sons, Singapore.	
<b>Reference Books</b>	<ol style="list-style-type: none"> <li>1. Prata R. P (2006), <i>Getting Started with MATLAB – A Quick Introduction for Scientist and Engineers</i>, Oxford University Press, New Delhi.</li> <li>2. <b>Title : MATHEMATICAL STATISTICS</b>		
<b>Hrs/ Week</b>	6	<b>Credits : 4</b>
<b>Objectives</b>	The objective of this syllabus is to give a systematic introduction to modern probability theory and Mathematical Statistics. Students mastering the material in this syllabus will be able to read research reports and to do research in this field. It will help the students to face SLET, NET, and CSIR examinations.	
<b>Unit</b>	<b>Contents</b>	<b>Hrs</b>
<b>Unit-I</b>	<p><b>Random events:</b> Preliminary remarks-Random events and operations performed on them-The system of axioms of the theory of probability-Conditional probability-Bayes theorem-Independent events.</p> <p><b>Random variables:</b> The concept of a random variable-The distribution function-Random variables of the discrete type and the continuous type-Functions of random variables-Multidimensional random variables-Marginal distributions-Conditional distributions-Independent random variables.</p> <p><b>Parameters of the distribution of a random variable:</b> Expected values-Moments-The Chebyshev inequality-absolute moments.</p>	15 hours
<b>Unit-II</b>	<p><b>Characteristic functions:</b> Properties of characteristic functions-The characteristic function and moments-Semi invariants-The characteristic function of the sum of independent random variables-Determination of the distribution function by the characteristic function-The characteristic function of multidimensional random vectors-Probability generating functions.</p> <p><b>Some probability distributions:</b> One point and two point distributions-The Bernoulli scheme. The Binomial distribution-The Poisson distribution.</p>	16 hours
<b>Unit-III</b>	<p><b>Some probability distributions:</b> The uniform distribution-The normal distribution-The gamma distribution-The beta distribution-The Cauchy and Laplace distributions.</p> <p><b>Limit theorems:</b> Preliminary remarks-Stochastic convergence-Bernoulli's law of large numbers-The Levy-Cramer theorem-</p>	15 hours

	The De Moivre - Laplace theorem.	
<b>Unit-IV</b>	<p><b>Sample moments and their functions:</b>  The notion of a sample-Statistic-the distribution of the arithmetic mean of independent normally distributed random variables-The <math>\chi^2</math> distribution-The distribution of the statistics(X'S)-Student's t-distribution-Fisher's Z-distribution.</p> <p><b>Significance tests:</b>  The concept of statistical test-Parametric tests for small samples-Parametric tests for large samples.</p>	16 hours
<b>Unit-V</b>	<p><b>The theory of estimation:</b>  Preliminary notions-Consistent estimates-Unbiased estimates-The sufficiency of an estimate-The efficiency of an estimate-Method of finding estimates-Confidence intervals.</p>	16 hours
<b>Text Book</b>	Marek Fisz,(1980), <i>Probability theory and Mathematical Statistics</i> , Third Edition, John Wiley & sons, Inc.	
<b>Reference Books</b>	<ol style="list-style-type: none"> <li>1. Gupta S. C. Kapoor V. K. (2000), <i>Fundamentals of Mathematical Statistics a Modern Approach</i>, 10<sup>th</sup> Edition, Sultan Chand &amp; Sons.</li> <li>2. <b>Title :</b>	<b>PARTIAL DIFFERENTIAL EQUATIONS</b>	
<b>Hrs/ Week</b>	5	<b>Credits : 4</b>
<b>Objectives</b>	<p>On completion of the course the students are expected to have</p> <ol style="list-style-type: none"> <li>i. Obtained solid introduction to nonlinear and linear partial differential equations.</li> <li>ii. Understood Charpit's method, Jacobi method, method of separation of variables, method of integral transforms.</li> <li>iii. a good understanding of Laplace equation, wave equation, diffusion equations and a good knowledge of their various applications in mathematics and other fields.</li> </ol>	
<b>Unit</b>	<b>Contents</b>	<b>Hrs</b>
<b>Unit-I</b>	Non-linear partial differential equations of the first order - Compatible systems of first order equations - Charpit's Method - Special types of first order equations and Jacobi's Method.	15 hours
<b>Unit-II</b>	Linear partial differential equations with constant coefficient and Equations with variable coefficients.	16 hours
<b>Unit-III</b>	Method of separation of variables and the method of integral transforms.	15 hours
<b>Unit-IV</b>	Elementary solutions of Laplace's equations - Families of equi-potential surfaces - Boundary value problems - Separation of variables and Problems with axial symmetry.	16 hours
<b>Unit-V</b>	Elementary solutions of one dimensional wave equation - Vibrating membranes: Application of calculus of variations - Elementary solutions of diffusion equation and Separation of variables.	16 hours
<b>Text Book</b>	Ian N. Sneddon, (2006) <i>Elements of Partial Differential Equations</i> . Dover Publication, New york.

<b>Title : NUMERICAL METHODS</b>		
<b>Hrs/ Week</b>	4	<b>Credits : 3</b>
<b>Objectives</b>		
<b>Unit</b>	<b>Contents</b>	<b>Hrs</b>
<b>Unit-I</b>	<b>Solving Nonlinear Equations:</b> Linear Interpolation Methods – Newton’s method – Muller’s Method – Newton’s Method for Polynomials (excluding Horner’s Methods, Parallel Processing) – Bairstow’s method for quadratic factors.	11 hours
<b>Unit-II</b>	<b>Numerical Differentiation And Integration:</b> Derivatives from differences tables – Higher-order derivatives – Divided difference, Central difference formulas – The trapezoidal rule-A composite formula – Romberg integration – Simpson’s rules.	11 hours
<b>Unit-III</b>	<b>Solving Set Of Equations :</b> The elimination method – Gauss Elimination and Gauss Jordan methods – LU decomposition method – Matrix inversion by Gauss-Jordan method – Methods of iteration – Jacobi and Gauss Seidal iteration – Relaxation method – Systems of nonlinear equations.	10 hours
<b>Unit-IV</b>	<b>Solution Of Ordinary Differential Equations :</b> Taylor series method – Euler and modified Euler methods – Runge-Kutta methods – Multistep methods – Milne’s method – Adams-Moulton method.	10 hours
<b>Unit-V</b>	<b>Boundary Value Problems And Characteristic Value Problems:</b> The shooting method – Solution through a set of equations – Derivative boundary conditions – Characteristic-value problems – Eigen values of a matrix by iteration – The power method	10 hours
<b>Text Book</b>	Gerald C.F. and Wheatley P.O. (1998), <i>Applied Numerical Analysis</i> , Sixth Edition, Addison- Wesley, Reading.

<b>Course</b>	M.Sc	<b>Effective From the Year : 2015</b>
<b>Subject code : 15PMS311</b> <b>Title : TOPOLOGY</b>		
<b>Hrs/ Week</b>	6	<b>Credits : 4</b>
<b>Objectives</b>	Topology is one of the basic disciplines of pure mathematics and concerns more on logical precision. Its ideas and methods have transformed large parts of geometry and analysis almost beyond recognition. It has also greatly stimulated the growth of abstract algebra. The course content of this paper serves to lay foundation for further study in analysis, geometric and algebraic topology.	
<b>Unit</b>	<b>Contents</b>	<b>Hrs</b>
<b>Unit-I</b>	Topological spaces, Basis for a topology - The order topology - The product topology on $X \times Y$ - The subspace topology - Closed sets and Limit points.	16 hours
<b>Unit-II</b>	Continuous functions - The metric topology - The metric topology (Continued)	15 hours
<b>Unit-III</b>	Connected spaces - Connected subspaces of the real line - Components and Local Connectedness - Compact spaces.	15 hours
<b>Unit-IV</b>	The Separation axioms - Normal spaces - The Urysohn lemma - The Urysohn Metrization Theorem - The Tietz Extension theorem.	16 hours
<b>Unit-V</b>	The Tychonoff theorem - The Stone-Cech Compactification - Metrization theorems and Para Compactness - The Nagata-Smirnov Metrization theorem - The Smirnov Metrization Theorem - Complete metric spaces.	16 hours

<b>Title : FUNCTIONAL ANALYSIS</b>		
<b>Hrs/ Week</b>	6	<b>Credits : 4</b>
<b>Objectives</b>	<p>On Completion of the course the students are expected</p> <ol style="list-style-type: none"> <li>i. to have a clear understanding of Normed linear spaces, Banach spaces, Hilbert spaces and <math>\beta(X, Y)</math></li> <li>ii. to understand some important, but simple to follow, theorems such as best approximation theorems, Projection theorem and Riesz Representation theorem</li> <li>iii. to have full grasp of the three important theorems of Functional Analysis namely Hahn-Banach Theorem, The Uniform Boundedness Principle and Closed Graph Theorem</li> <li>iv. to apply the concepts and results covered in the course to Numerical Analysis and Operator equations.</li> </ol>	
<b>Unit</b>	<b>Contents</b>	<b>Hrs</b>
<b>Unit-I</b>	Norm on a Linear Space - Examples of Normed Linear Spaces - Semi norms and Quotient Spaces - Product Space and Graph Norm - Semi – Inner Product and Sesquilinear Form - Banach Spaces.	15 hours
<b>Unit-II</b>	Completion of Normed Linear Spaces - Some Properties of Banach Spaces - Baire Category Theorem (statement only) - Schauder Basis and Separability - Heine-Borel Theorem and Riesz Lemma - Best Approximation Theorems - Projection Theorem.	16 hours
<b>Unit-III</b>	Operators on Normed Linear Spaces Bounded Operators - Some Basic Results and Examples - The Space $\beta(X, Y)$	

	Norm on $\beta(X, Y)$ - Riesz Representation Theorem - Completeness of $\beta(X, Y)$ - Bessel's Inequality - Fourier Expansion and Parseval's Formula - Riesz-Fischer Theorem	16 hours
<b>Unit-IV</b>	Hahn-Banach Theorem and Its Consequences - The Extension Theorem – Consequences - On Uniqueness of Extension - Separation Theorem	15 hours
<b>Unit-V</b>	Uniform Boundedness Principle - The Theorem and Its Consequences - Closed Graph Theorem and Its Consequences - Closed Graph Theorem - Bounded Inverse Theorem - Open Mapping Theorem - A Stability Result for Operator Equations	16 hours
<b>Text Book</b>	Thamban Nair, M. (2010). <i>Functional Analysis - A First Course</i> . Prentice Hall of India Pvt. Ltd. New Delhi.

<b>Title : COMBINATORICS</b>		
<b>Hrs/ Week</b>	6	<b>Credits : 4</b>
<b>Objectives</b>	<p>On completion of the course the learners are expected</p> <ol style="list-style-type: none"> <li>i. to have gained a working knowledge of the basic ideas and techniques of the subject</li> <li>ii. to handle various aspects of assignment problems, beginning with the famous result of Philip Hall, and on to various applications.</li> <li>iii. to deal with configurations</li> <li>iv. to have a sound knowledge of block designs and its applications to error correcting codes</li> </ol> <p>to understand the Steiner system <math>S(5, 8, 24)</math> and the construction of Leech Lattice in 24 dimensions.</p>	
<b>Unit</b>	<b>Contents</b>	<b>Hrs</b>
<b>Unit-I</b>	Introduction to basic ideas - Selections and Binomial coefficients – Permutations - Ordered selections- Unordered selections - Further remarks on the binomial theorem and Miscellaneous	16 hours
<b>Unit-II</b>	<b>Pairings problems:</b> Pairings within a set - Pairings between sets - an optimal assignment problem and Gale's optimal assignment problem.	15 hours
<b>Unit-III</b>	<b>Recurrence:</b> Some miscellaneous problems - Fibonacci type relations - Using Generating Functions - Miscellaneous methods and Counting simple electrical networks	16 hours
<b>Unit-IV</b>	<b>The Inclusion – Exclusion Principle:</b> The principle, The Rook Polynomials- Steiner Systems and Sphere Packings - Introductory remarks - Steiner Systems $S(5,8,24)$ and Leech's Lattice.	16 hours

<b>Unit-V</b>	<b>Block Designs and Error correcting codes:</b> Block designs - Square block designs - Hadamard configurations and Error correcting codes.	15 hours
<b>Text Book</b>	Ian Anderson. (1974), <i>A first course in combinatorial Mathematics</i> . Oxford University press.

<b>Department</b>	Mathematics	
<b>Course</b>	M.Sc	<b>Effective From the Year : 2015</b>
<b>Subject code : 15PMS314</b> <b>Title : GRAPH THEORY</b>		
<b>Hrs/ Week</b>	6	<b>Credits : 4</b>
<b>Objectives</b>	Graph theory is a major area of Combinatorics. In this Course we introduce the learners to some basic topics in graph theory.	
<b>Unit</b>	<b>Contents</b>	<b>Hrs</b>
<b>Unit-I</b>	<b>Graphs and Subgraphs:</b> Graphs and simple graphs - Graph Isomorphism - The Incidence and adjacency matrices – Subgraphs - Vertex degrees - path and Connection and Cycles. Trees: Trees - Cut edges and bonds - Cut vertices and Cayley's formula.	16 hours
<b>Unit-II</b>	<b>Connectivity:</b> Connectivity and Blocks. Euler Tours and Hamilton cycles: Euler tours and Hamilton cycles.	16 hours
<b>Unit-III</b>	<b>Matchings:</b> Matchings - Matchings and coverings in bipartite graphs and perfect matchings. Independent sets and Cliques: Independent sets.	16 hours
<b>Unit-IV</b>	<b>Edge Colourings:</b> Edge chromatic number and Vizing's theorem. Vertex Colourings: Chromatic number, Brooks' theorem, Hajo's Conjecture - Dirac's Theorem, Chromatic polynomials, Girth and chromatic number.	15 hours
<b>Unit-V</b>	<b>Planar Graphs:</b> Plane and planar graphs, Dual graphs - Euler's formula and Kuratowski's theorem. Directed Graphs: Directed graphs - Directed paths and directed cycles.	15 hours

<b>Text Book</b>	Bondy, J.A. and Murty, U.S.R. (1976), <i>Graph Theory with Applications</i> , Macmillan Company.

<b>Course</b>	M. Sc	<b>Effective From the Year :2015</b>
<b>Subject code : 15PMS3E3</b> <b>Title : LATEX</b>		
<b>Hrs/ Week</b>	4	<b>Credits : 3</b>
<b>Objectives</b>	This course provides students with an introduction to technical writing and computer presentation with LATEX, which is the de-facto standard in computer science, mathematics and many of sciences.	
<b>Unit</b>	<b>Contents</b>	<b>Hrs</b>
<b>Unit-I</b>	Text formatting – TEX and its offspring - What’s different in LATEX 2 $\epsilon$ - Distinguishing LATEX 2 $\epsilon$ - Basics of LATEX file.	11 hours
<b>Unit-II</b>	Commands and environments – Command names and arguments – Environments - Declarations - Lengths - Special Characters - Fragile Commands - Exercises.	11 hours
<b>Unit-III</b>	Document layout and Organization – Document class, Page style - Parts of the document - Table of contents -Fine – tuning text - Word division. Displayed text – Changing font - Centering and indenting, Lists - Generalized lists - Theorem like declarations, Tabulator stops - Boxes.	10 hours
<b>Unit-IV</b>	Tables - Printing literal text - Footnotes and marginal notes - Drawing pictures with Latex.	10 hours
<b>Unit-V</b>	Mathematical formulas – Mathematical environments, Main elements of math mode - Mathematical symbols- Additional elements - Fine – tuning mathematics.	10 hours
<b>Text Book</b>	Kopka.H and Daly P.W. (1999), <i>A Guide to Latex, Third Edition, Addison – Wesley, London.</i>

<b>Title</b>	<b>: PROGRAMMING LAB IN LATEX</b>	
<b>Hrs/ Week</b>	<b>2</b>	<b>Credit : 2</b>
<b>Objectives</b>	This course is designed to provide a practical exposure to the students on LATEX	

### **List of Programs**

1. To illustrate different font sizes in Latex
2. To prepare a title page in Latex document
3. To understand the section hierarchy of book environment in Latex
4. To prepare a list using itemize environment in Latex
5. To prepare a table in Latex
6. To prepare a table in Latex with multiple title row
7. To split the equations in Latex
8. To type a equations using left cases in Latex
9. To type a system of equations in Latex
10. To type a equations using right cases in Latex
11. To type a Binomial equations in Latex
12. To type a Christottol symbol in Latex
13. To use a cross reference in Latex article
14. To import '.eps' picture in Latex
15. To import a picture using Latex draw in Latex

<b>Title : FLUID DYNAMICS</b>		
<b>Hrs/ Week</b>	6	<b>Credits : 4</b>
<b>Objectives</b>	<p>On completion of the course the students are expected</p> <ol style="list-style-type: none"> <li>i. to have a good understanding of the fundamental equation of viscous compressible fluid</li> <li>ii. to have studied Bernoulli equation, Momentum theorems and their various applications.</li> <li>iii. to understand the motion of solid bodies in fluid</li> <li>iv. to have a sound knowledge of boundary layer theory.</li> </ol>	
<b>Unit</b>	<b>Contents</b>	<b>Hrs</b>
<b>Unit-I</b>	<p><b>Kinematics of fluids and Fundamental equations of the flow of viscous compressible fluids:</b></p> <p>Methods of describing fluid motion: Lagrangian method, Eulerian method-Translation, Rotation and Rate of deformation- Streamlines, Path lines and Streak lines- Material derivative and acceleration- Vorticity, Vorticity in Polar – coordinates- Vorticity in orthogonal curvilinear coordinates- The equation of continuity - Conservation of mass- Equation of motion - conservation of momentum- The energy equation - conservation of energy.</p>	16 hours
<b>Unit-II</b>	<p><b>One dimensional inviscid incompressible flow and two and three dimensional inviscid incompressible flow:</b></p> <p>Equation of continuity Stream tube flow- Equation of motion Euler's equation-The Bernoulli's equation- Applications of the Bernoulli equation((a) &amp; (b)) - The Momentum theorem- Applications of the momentum theorem((a) &amp; (b))- Equation of continuity - Eulerian equation of motion- Circulation theorems- Velocity potential - irrotational flow- Integration of the equations of motion - Bernoulli's equation- The momentum theorem- The moment of momentum theorem.</p>	16 hours

<b>Unit-III</b>	<p><b>Laplace's equation:</b></p> <p>Laplace equation in Cartesian coordinates-Laplace equation in cylindrical coordinates – Laplace equation in Spherical coordinates(derivations omitted) -Stream function in 2 dimensional motion- The Flow net - Two dimensional flow examples- Stream function in three dimensional motion – Three dimensional axially symmetric flow examples</p>	15 hours
<b>Unit-IV</b>	<p><b>Motion of solid bodies in a Fluid:</b></p> <p>Rankine's method of constructing streamlines- Superposition of source and rectilinear flow- Superposition of source and sink with rectilinear flow – The Rankine body- Superposition of rectilinear flow and doublet- Superposition of Vortex, Rectilinear flow and doublet in a two dimensional case.</p>	15 hours
<b>Unit-V</b>	<p><b>Laminar flow of viscous incompressible fluids and Boundary Layer Theory:</b></p> <p>Flow between parallel flat plates- Steady flow in pipes, Flow between two co-axial cylinders- Flow between two concentric rotating cylinders - Boundary layer concept- The boundary layer equations in two dimensional flows- The boundary layer along a flat plate- The Blasius solution.</p>	16 hours
<b>Text Book</b>	Yuan, S.W. (1988), <i>Foundations of fluid mechanics</i> . Prentice Hall of India Pvt. Ltd.	
<b>Reference Books</b>	<ol style="list-style-type: none"> <li>1. Shanthi Swarup(2000), <i>Fluid dynamics</i>, Krishna Prakasan media Pvt. Ltd., Meerut,</li> <li>2. Frank Chorlton (2004), <i>Text book on Fluid Dynamics</i>, CBS Publishers and Distributors, Delhi.</li> </ol>	

**CONTENTS:**

For Unit I : Sections 3.1 - 3.5, 5.1 - 5.3

For Unit II : Sections 6.1 - 6.4, 6.6 - 6.7, 7.1 - 7.7

For Unit III : Sections 7.8 - 7.13.

For Unit IV : Sections 7.14 - 7.16, 7.18, 7.19.

For Unit V : Sections 8.3 - 8.4, 8.5, 9.2 - 9.3.

<b>Title : CONTROL THEORY</b>		
<b>Hrs/ Week</b>	6	<b>Credits : 4</b>
<b>Objectives</b>	Control theory is relatively a young branch of Applied Mathematics. On completion of the course the students are expected to develop their knowledge in the basic problems, namely, observability, controllability, stability, stabilizability and optimal control.	
<b>Unit</b>	<b>Contents</b>	<b>Hrs</b>
<b>Unit-I</b>	<b>Observability:</b> Linear Systems - Observability Grammian - Constant coefficient systems - Reconstruction kernel and Nonlinear Systems.	16 hours
<b>Unit-II</b>	<b>Controllability:</b> Linear Systems - Controllability Grammian, Adjoint Systems - Constant coefficient systems - Steering function and Controllability of Nonlinear System.	15 hours
<b>Unit-III</b>	<b>Stability:</b> Stability - Uniform Stability and Asymptotic Stability of Linear Systems - Perturbed linear systems and Nonlinear systems.	15 hours
<b>Unit-IV</b>	<b>Stabilizability:</b> Stabilization via linear feedback control, Bass method - The Controllable subspace and Stabilization with restricted feedback.	16 hours
<b>Unit-V</b>	<b>Optimal Control:</b> Linear time varying systems with quadratic performance criteria - Linear time invariant systems and nonlinear systems.	16 hours
<b>Text Book</b>	Balachandran, K. and Dauer, J.P. (2012). <i>Elements of Control Theory.</i> : Narosa, New Delhi.

<b>Title : STOCHASTIC DIFFERENTIAL EQUATIONS</b>		
<b>Hrs/ Week</b>	6	<b>Credits : 5</b>
<b>Objectives</b>	Stochastic differential equation have a wide range of applications inside as well as outside mathematics and the subject has a rapidly developing life of its own as a fascinating research field with many interesting unanswered questions. The course needs some background in measure theory. In this paper six problems are introduced where stochastic differential equations play an essential role in finding their solutions, which will motivate the students for the further advance studies in this and related branches of mathematics.	
<b>Unit</b>	<b>Contents</b>	<b>Hrs</b>
<b>Unit-I</b>	<p><b>Introduction:</b></p> <p>Stochastic Analogs of Classical Differential Equations, Filtering Problems - Stochastic Approach to Deterministic Boundary Value Problems - Optimal Stopping, Stochastic Control and Mathematical Finance.</p> <p><b>Some Mathematical Preliminaries:</b></p> <p>Probability Spaces - Random Variables and Stochastic Processes and an Important Example: Brownian motion.</p>	16 hours
<b>Unit-II</b>	<p><b>Ito Integrals:</b></p> <p>Construction of the Ito Integral - Some Properties of the Ito Integral and Extensions of the Ito Integral.</p>	15 hours
<b>Unit-III</b>	<p><b>The Ito Formula and The Martingale Representation Theorem:</b></p> <p>The 1-dimensional Ito Formula- the Multi-dimensional Ito Formula and the Martingale Representation Theorem</p> <p><b>Stochastic Differential Equations:</b></p> <p>Examples and Some Solution Methods - An Existence and Uniqueness Result and Weak and Strong Solutions.</p>	16 hours

<b>Unit-IV</b>	<b>The Filtering Problem:</b> Introduction - The 1-dimensional Linear Filtering Problem and the Multidimensional Linear Filtering Problem.	15 hours
<b>Unit-V</b>	<b>Diffusions: Basic Properties:</b> The Markov Property, the Strong Markov Property, the Generator of Ito Diffusion, the Dynkin Formula, and the Characteristic Operator.	16 hours
<b>Text Book</b>	Bernt Oksendal. (2014), <i>Stochastic Differential Equations – An Introduction with Applications</i> . Sixth Edition. Springer-Verlog, Heidelberg.	
<b>Reference Book</b>	J. Medhi. (2009). <i>Stochastic Processes</i> . Third Edition. New Age International(p) ltd.
